ADAPTATION FUND

## CENTRE DE SUIVI ECOLOGIQUE / SENEGAL

### Project: "Reducing vulnerability and building resilience of coastal communities in the Saloum islands (Dionewar)"

The project aims to be a response to the economic hardships and environmental challenges faced by populations due to a high exposure to natural hazards. It will be implemented through: (1) investments for the development of aquaculture, the revival of fishing and processing of fishery products and replenishment of vegetation; (2) the establishment of protection infrastructures for Dionewar to face flooding; (3) the development of planning and local regulations activities associated with a knowledge man

## Operational challenges and ways in which they were addressed

- Working on a island
- Adapted materials and alternative options
- Sources of water under severe climate change
- Issue of land tenure
- Benefits sharing
- High scaling up potential
- Continous climate change impacts as we were work

## Lessons Learned and best Practices

- A strong consensus within the community to support a local climate change adaptation initiative
- A community traditionally mobilized around endogenous local development initiatives
- A multi-stakeholder institutional set-up based on a distribution of roles according to the distinctive skills of each player, favoring the effectiveness of interventions, their complementarity, co-learning and the post-project sustainability of acquired knowledge
