Adaptation Fund Board Project and Programme Review Committee Thirty-fourth Meeting Bonn, Germany, 8-9 October 2024

# **PROPOSAL FOR COMOROS**

# ADAPTATION FUND BOARD SECRETARIAT TECHNICAL REVIEW OF PROJECT/PROGRAMME PROPOSAL

PROJECT/PROGRAMME CATEGORY: Regular-sized Project Concept

Country/Region:	Comoros		
Project Title:	Enhancing youth entrepreneurship through Climate Resilient Opportunities (ECO-Youth)		
<b>Thematic Focal Area</b>			
Implementing Entity:	International Fund for Agricultural Development (IFAD)		
<b>Executing Entities:</b>	Ministry of the Environment in charge of Tourism		
AF Project ID:	AF0000403		
IE Project ID:	Requested Financing from Adaptation Fund (US Dollars): 10,000,000		
Reviewer and contac	ct person: Naoki Uozawa Co-reviewer(s): Marcus Johannesson		
IE Contact Person:	IE Contact Person:		

Technical Summary	The project Enhancing youth entrepreneurship through Climate Resilient Opportunities (ECO-Youth) aims to contribute to poverty reduction and the strengthening of rural communities' resilience and adaptation to climate change. This will be done through the three components below:
	Component 1: Capacity building and green entrepreneurial and employment initiatives (USD 4,720,000);
	Component 2: Green business partnerships and sustainable employment opportunities (USD 3,045,000);
	Component 3: Strengthening the policy and institutional framework for rural youth employment (USD 577,988).
	Requested financing overview: Project/Programme Execution Cost: USD 873,612 Total Project/Programme Cost: USD 9,216,590 Implementing Fee: USD 783,410 Financing Requested: USD 10,000,000

	The first technical review raises several issues, such as climate change adaptation justification, ESP, Gender Policy, duplication of other programs/projects, full cost of adaptation, and results framework, as is discussed in the number of Clarification Requests (CRs) and Corrective Action Requests (CARs) raised in the review.
Date:	27 <sup>th</sup> August, 2024

Review Criteria	Questions	1 <sup>st</sup> Review Comments [27 <sup>th</sup> August 2024]
	<ol> <li>Is the country party to the Kyoto Protocol, and/or the Paris Agreement?</li> </ol>	Yes.
Country Eligibility	2. Is the country a developing country particularly vulnerable to the adverse effects of climate change?	<b>Yes.</b> The Union of the Comoros is one of the most climate- vulnerable countries in the world, with 54.2% of the population living in high-risk areas (para 2). It is also both a LDC and a SIDS.
	<ol> <li>Has the designated government authority for the Adaptation Fund endorsed the project/programme?</li> </ol>	<b>Yes.</b> As per the Endorsement letter dated 29/02/2024.
	2. Does the length of the proposal amount to no more than Fifty pages for the project/programme concept, including its annexes?	Yes. CR1: Please ensure coherence in the numbering of pages and tables, such as the duplication of Table 1.
Project Eligibility	3. Does the project / programme support concrete adaptation actions to assist the country in addressing adaptive capacity to the adverse effects of climate change and build in climate resilience?	Not Cleared. The project aims to motivate the rural low-income youth, aged 15-35, in the agricultural sector to facilitate networking and improve job market prospects (p.12-13). The proposal also describes the impact of climate change on agricultural resources, fishing resources, and water resources (p.9-10).

	However, it lacks a detailed explanation of how the project components proposed solutions will lead to substantial tangible outcomes to address the adverse effects of climate change on agricultural, fishing and water resources.
	<b>CAR1</b> : Please provide the climate change adaptation justification of the proposed solution. This may be articulated through a Theory of Change, which will assume what needs to change and in what way among actors and in-between actors. Define the desired end-state and explain how specific actions will lead to the desired tangible outcomes.
	A brief description of the project site, including 66 villages across three islands of Anjouan, Moheli, and Grande Comore, and the target beneficiaries (6,000 low-income youth) have been provided.
	<b>CR2:</b> Please specify each village and provide an estimated number of target beneficiaries per village.
4. Does the project / programme provide economic, social and environmental benefits, particularly to	Not Cleared.
vulnerable communities, including gender considerations, while avoiding or mitigating negative impacts, in compliance with the Environmental and Social Policy and Gender	The project targets 50% female beneficiaries, but does not include the required initial gender analysis and specific strategies to achieve the gender parity.
Policy of the Fund?	<b>CAR2</b> : Please provide an assessment at the earliest stage of project/programme preparation to determine the different needs, capabilities, roles and knowledge resources of women and men, and/or identify how changing gender dynamics might drive lasting change.

	The women's group met during the consultations process and other which together with desk research may suffice this demand while considering contextual, norms and intersectionality which make out barriers to gender equality. For guidance, please refer to the <u>Gender Guidance Document (2022).</u>
5. Is the project / programme cost effective?	<ul> <li>Not Cleared.</li> <li>The cost-effectiveness analysis presented in Table 4 compares scenarios with and without the project.</li> <li>CAR3: Please provide a cost-focused analysis.</li> <li>Additionally, it would be beneficial to compare the proposed solution to alternative measures that address the impact of climate change. Please note that the cost effectiveness should be demonstrated from a sustainability point of view.</li> </ul>
6. Is the project / programme consistent with national or sub-national sustainable development strategies, national or sub-national development plans, poverty reduction strategies, national communications and adaptation programs of action and other relevant instruments?	Not Cleared. While the proposal refers to relevant national and sub- national sustainable development strategies (p. 9, 24- 25) including environmental conventions resulting from Rio and strategies that flow from them (e.g., NAPA, NAP, NDC etc), as well as national strategies and policies related to biodiversity, poverty reduction, gender equality and youth, the project's adaptation justification must be clarified (see CAR1), to ensure that the project adequately connects to and contribute to the implementation of mentioned strategies and plans.

7. Does the project / programme meet the relevant national technical standards, where applicable, in compliance with the Environmental and Social Policy of the Fund?	<ul> <li>Not Cleared.</li> <li>The project explains how the project meets the relevant national technical standards (p.25-26).</li> <li>CR3: Given that one of the main target beneficiaries is young people aged 15-17. Please clarify that the proposed intervention complies with child labour laws, and is in compliance with the Funds Environmental and Social Policy.</li> </ul>
8. Is there duplication of project / programme with other funding sources?	Not Cleared. CR4: The proposal references other projects and explains complementarities and synergies (Table 3), particularly noting collaboration with IFAD's FORCE Jeunes project. Please provide more detailed information on the FORCE Jeunes project, including specific points of linkages, and synergies, as well as how overlap will be avoided. Additionally, refer to question 11 for a complete rationale regarding the full cost of adaptation reasoning approach.
9. Does the project / programme have a learning and knowledge management component to capture and feedback lessons?	Not Cleared. CAR4: Knowledge management is included under the subcomponent C.2. Please specify how the KM related activities will be institutionalized to consistently and systematically track and periodically analyze experiences to gain insights and lessons learned that continuously could feed into and improve the projects implementation.

10. Has a consultative process taken place, and has it involved all key stakeholders, and vulnerable groups, including gender considerations in compliance with the Environmental and Social Policy and Gender Policy of the Fund?	<ul> <li>Not Cleared.</li> <li>An initial consultative process has taken place, where national decision-makers, technical and financial partners as well as local partners and potential beneficiaries were met. The process identified the nature of young people's training needs, as well as the need for some young people to reskill in job-creating sectors such as processing (para 131). Please refer to CAR1 for the adaptation justification.</li> <li>Among actors met were a women's group and the Directorate General for the Environment, it is however unclear to what extent considerations related to AF's Environment and Social Policy were explored.</li> <li>CR5: Given that for instance an initial gender assessment is absent, please clarify how gender and environmental issues were discussed and what was the outcome. Particularly, clarify how the reflections on gender equality that took place during the stakeholder consultations considered context, norms and intersectionality which may be difficult for women. (Please note that this CR is related to CAR2 above.)</li> </ul>
11. Is the requested financing justified on the basis of full cost of adaptation reasoning?	Not Cleared. CAR5: The proposal does not explain how the project applies the full cost of adaptation reasoning approach. The proposal should clearly illustrate that the project activities are relevant in addressing its adaptation objectives and that, taken solely, without additional funding from other donors (including IFAD's FORCE Jeunes project), they will help achieve these objectives. Even if the project has co-financing, the Adaptation Fund project should be able to deliver its

	outcomes and outputs regardless of the success of the other project(s). Please refer to <u>The Operational</u>
12. Is the project / program aligned with AF's results framework?	Policies and Guidelines (p.11) Not Cleared.
Inamework?	The proposal demonstrates the alignment with AF result framework (p.33-34)
	<b>CAR6</b> : The project result framework must include at least the core impact indicator "Number of beneficiaries including estimations for direct and indirect beneficiaries.
	<b>CR6</b> : In the column labeled 'Fund Outcome Indicator,' 'Output 6.1' appears to be mistakenly labeled and should be 'Indicator 6.1.' Please check the table for such discrepancies and make the necessary correction/s.
13. Has the sustainability of the project/programme	Not Cleared.
outcomes been taken into account when designing the project?	The Green Financing Mechanism under Component 2 is structured as a shared-cost mechanism, where junior participants contribute 10% and senior participants contribute 40% of their business plan costs, either in kind or in cash (para 90).
	<b>CR7:</b> Please elaborate on how low-income youth will not be prevented from accessing the mechanism – i.e. will they be able to afford these contributions? This question is particularly relevant given the adaptation related business activities are often perceived as less profitable compared to other businesses.
	<b>CR8</b> : The adaptation benefits achieved from the project interventions should be sustainable beyond the

		project's conclusion. Please detail any strategies outlined in the proposal for enabling replication and/or scaling up using other funds or projects, including IFAD's FORCE Jeunes project, after the project ends.
	14. Does the project / programme provide an overview of environmental and social impacts / risks identified, in compliance with the Environmental and Social Policy and Gender Policy of the Fund?	<ul> <li>Not Cleared.</li> <li>The proposal concludes to be classified as Category B. However, it is mentioned that IFAD's categorization was used.</li> <li>CR9: Please clarify if AF's risk categorisation has been used while assessing the environmental and social risks and their alignment with the AF's 15 principles. Guidance on AF's 15 principles.</li> <li>The project plans to establish 3,250 business plans across various sectors, yet the specific business activities are not identified at the proposal stage.</li> <li>CR10: Please clarify how these undefined business activities are expected to contribute to climate change adaptation.</li> <li>Additionally, if the project involves such Unidentified Sub-Projects (USPs), ensure the proposal includes provisions for these USPs to comply with the Environmental and Social Policy (ESP). For your reference, USPs in innovation proposals are acceptable when adequately justified. Please refer to guidance on USPs.</li> </ul>
Resource Availability	<ol> <li>Is the requested project / programme funding within the cap of the country?</li> </ol>	Yes.

		1
	<ol> <li>Is the Implementing Entity Management Fee at or below 8.5 per cent of the total project/programme budget before the fee?</li> </ol>	Cleared. IE fee is at 8.5% of the total project budget.
	3. Are the Project/Programme Execution Costs at or below 9.5 per cent of the total project/programme budget (including the fee)?	Cleared. EE fee is at 9.5% of the total project budget. CR11: Please confirm that 'Project/Program Implementation Costs' are equivalent to 'Execution Cost' in the budget table.
Eligibility of IE	<ol> <li>Is the project/programme submitted through an eligible Implementing Entity that has been accredited by the Board?</li> </ol>	Yes. The accreditation of IFAD is to expire on December 21, 2025.
	<ol> <li>Is there adequate arrangement for project / programme management, in compliance with the Gender Policy of the Fund?</li> </ol>	n/a at concept stage
	<ol><li>Are there measures for financial and project/programme risk management?</li></ol>	n/a at concept stage
Implementation Arrangements	3. Are there measures in place for the management of for environmental and social risks, in line with the Environmental and Social Policy and Gender Policy of the Fund?	n/a at concept stage
	<ol> <li>Is a budget on the Implementing Entity Management Fee use included?</li> </ol>	n/a at concept stage
	<ol> <li>Is an explanation and a breakdown of the execution costs included?</li> </ol>	n/a at concept stage

<ol> <li>Is a detailed budget including budget notes included?</li> </ol>	n/a at concept stage
7. Are arrangements for monitoring and evaluation clearly defined, including budgeted M&E plans and sex-disaggregated data, targets and indicators, in compliance with the Gender Policy of the Fund?	n/a at concept stage
8. Does the M&E Framework include a break-down of how implementing entity IE fees will be utilized in the supervision of the M&E function?	n/a at concept stage
9. Does the project/programme's results framework align with the AF's results framework? Does it include at least one core outcome indicator from the Fund's results framework?	n/a at concept stage
10. Is a disbursement schedule with time-bound milestones included?	n/a at concept stage

# **CONCEPT NOTE PROPOSAL FOR SINGLE COUNTRY**

# PART I PROJECT INFORMATION

Title of Project:	Enhancing youth entrepreneurship through Climate Resilient Opportunities (ECO-Youth)
Country:	Comoros
Thematic Focal Area:	Rural Development
Type of Implementing Entity:	Multilateral Implementing Entity
Implementing Entity	International Fund for Agricultural Development <b>(</b> IFAD)
Executing Entities:	Ministry of the Environment in charge of Tourism
Amount of Financing Requested:	10,000,000 (in U.S Dollars Equivalent)
Project Formulation Grant Request (avai	lable to NIEs only): Yes □ No ⊠
Amount of Requested financing for PFG	: (in U.S Dollars Equivalent)
Letter of Endorsement (LOE) signed: Yes	
NOTE: LOEs should be signed by the Designated	d Authority (DA). The signatory DA must be on file with the

NOTE: LOEs should be signed by the Designated Authority (DA). The signatory DA must be on file with the Adaptation Fund. To find the DA currently on file check this page: <u>https://www.adaptation-fund.org/apply-funding/designated-authorities</u>

## Stage of Submission:

This concept has been submitted before

It is the first submission ever of the concept proposal

In case of a resubmission, please indicate the last submission date: Click or tap to enter a date.

# Please note that concept note documents should not exceed 50 pages, including appendices.

# Project Background and Context:

Provide brief information on the problem the proposed project is aiming to solve. Outline the economic social, development and environmental context in which the project would operate.

## A. Geography

1. The Comoros is an archipelago in the south-western Indian Ocean, 400 km north-west of Madagascar and 300 km from the African coast in the Mozambique Channel. The Comoros is made up of oceanic islands that appeared around 10 million years ago, and several islets in the Indian Ocean. The morphology and dynamics of the islands vary, corresponding to different stages of evolution: Grande Comore is the most recent, with active volcanism. The other islands of the archipelago are aligned along a south-east/north-west axis. The islands, separated by deep underwater channels, are (from east to west): Anjouan (424 km<sup>2</sup>), Mohéli (290 km<sup>2</sup>) and Grande Comore (1148 km<sup>2</sup>). The total surface area of the three islands that make up the Union of the Comoros is 1862 km<sup>2</sup>.

2. Due to its geographical location and topography, the Union of the Comoros is one of the most climate-vulnerable countries in the world, with 54.2% of the population living in high-risk areas<sup>1</sup>.

## B. Governance and administration

3. The seat of government of the Union of the Comoros is in Moroni, the capital of Grande Comore. The political and institutional framework of the Comoros was unstable and volatile until 2001, when a new constitution was adopted, creating the Union of the Comoros. Based on a reconciliation agreement between the three islands. The Union government brings together the three islands, and is responsible for matters relating to foreign relations and debt repayment, as well as the general coordination of national policies and development actions in the three islands. Within the framework of the Union, each island has its Governor.

4. On July 30, 2018, the Comorians approved a new constitutional revision by referendum, which strengthened the powers of the president, in particular authorizing him to run for two consecutive terms and ratified the abolition of both the post of vice-president and the constitutional court in favor of the Supreme Court.

5. At regional level, the Union of the Comoros is a member of the African Union, the Indian Ocean Commission (IOC), which groups together 4 island states in the south-western Indian Ocean (Madagascar, Mauritius, Seychelles, Union of the Comoros) and the French department of Reunion. It is also part of the Common Market for Eastern and Southern Africa (COMESA).

## C. Economy

6. The Union of the Comoros is a small, fragile island state, with low growth and high vulnerability to shocks. Its GDP per capita stands at USD 1,485 (World Bank, 2022). The country's economic performance is below the average for sub-Saharan Africa. Over the period 2000-2019, growth averaged 2.9% per year. The archipelago's economy remains largely undiversified, undermined by weak infrastructure and a business environment in need of reform. Economic activities are mainly carried out by small-scale players in the informal sector and the diaspora.

7. In 2023, the economy grew by around 3%, with domestic activity buoyed by the resumption of largescale weddings and the associated increase in diaspora arrivals, mainly from France. However, the increase in per capita income was only 0.4%, due to demographic growth (estimated at 2%). The primary sector benefited from higher agricultural prices and favourable weather conditions. Inflationary pressures have eased, with inflation falling from 12.4% in 2022 to 9.2% in 2023<sup>2</sup>. Economic recovery from the slowdown linked to the COVID pandemic is set to continue, with growth reaching 3.3% in 2024 and 4.2% in 2025-2026, driven mainly by private consumption and public investment.

8. The budget deficit continued to widen in 2023 to around 4.4% of GDP, despite improved domestic revenue mobilization. The deterioration of the fiscal position by 0.4 percentage points of GDP in 2023 is mainly explained by a sharp increase in public spending of 3.5 percentage points of GDP, in particular by

<sup>&</sup>lt;sup>1</sup> Climate Change Knowledge Portal

<sup>&</sup>lt;sup>2</sup> https://www.banquemondiale.org/fr/country/comoros/overview

the increase in public capital expenditure<sup>3</sup>. The poverty rate is expected to fall slowly to 36.2% in 2026, as the economy continues to grow faster.<sup>4</sup>

#### D. Population

9. The Comoros is densely populated, with around 465 inhabitants per km<sup>2</sup>, and more than half of the population (53%) of 869,595 (2020) is under the age of 20. High population density puts intense pressure on natural resources and the environment. The social fragility of the Comoros is high: the Human Development Index (HDI) of the Comoros is 0.586 in 2022, placing the country 152nd out of 193 countries.

10. The country is ranked among the poorest in the world, with a GDP per capita in 2022 estimated at USD 1,485 and a poverty rate of 45%. The employment rate is only 54% of the population, and over 70% of those in work are poor working people. The Diaspora, estimated at 400,000 people, or around 50% of the population, contributes 25% of the national GDP.

11. The primary sector (agriculture, fisheries, and livestock breeding) accounts for 46% of GDP, compared with 12.4% for the secondary sector. It provides 57% of total jobs, 62.7% of which are held by women, and 90% of operating revenues. The country's geographical location and topography also make Comoros one of the most climate-vulnerable countries in the world, with 54.2% of the population living in high-risk areas.

#### E. Biodiversity and forestry

12. The Union of the Comoros has a rich biodiversity that includes some 2,000 indigenous plants, of which around 33% are considered endemic. Biodiversity is one of the basic elements of the country's economy, even more crucial as it is the raw material for any ecotourism development. Ecologically speaking, the Comoros lie at the centre of the triangle of southern Tanzania, northern Mozambique and northwestern Madagascar, now considered the world's second-largest reef biodiversity triangle after Indonesia<sup>5</sup>.

13. The Union of the Comoros has a varied but fragile ecosystem that is under serious threat. Environmental degradation is driven by to anthropogenic pressures linked to poverty and unsustainable farming practices. These practices include the misuse of inputs, slash-and-burn agriculture, overexploitation of soils, deforestation and the loss of forest cover due to the conversion of land to agriculture. Population growth directly intensifies the pressure on the natural resources, which the population relies on daily for shelter, food and income-generating activities<sup>6</sup>.

14. Pressure on natural resources is also evident through poaching of protected species, extraction of coastal materials and environmental pollution stemming from household waste. This pressure is exacerbated by the population's extreme poverty and dependence on natural resources, and the absence of alternatives to traditional production systems<sup>7</sup>. According to the United Nations<sup>8</sup> practices linked to deforestation have resulted in a sharp decline in forest area, which fell from 31,000 to 3,000 ha between 1950 and 2016, while 15% of plant species are thought to have disappeared over the same period.

15. Unsustainable fishing practices have also been observed, jeopardizing the sustainability of fishery resources, and contributing to food insecurity. This primarily affects vulnerable groups, particularly fishermen, who rely on these resources for their livelihoods and subsistence.

#### F. Water resources

16. In Grande Comore, the high permeability of the soils prevents the existence of permanent water courses, despite the island's abundant rainfall. Although numerous watercourses are found in Anjouan and Mohéli, most of them are seasonal or drying up, due to massive and uncontrolled deforestation of the watersheds. Underground aquifers exist on all three islands, however, they have not been extensively

studied, except on Grande Comore, where a portion of these aquifers is being exploited<sup>9</sup>.

17. **The** available water resources would be sufficient to provide a continuous water supply if managed sustainably<sup>10</sup>. Existing surface water supply systems on the islands of Anjouan and Mohéli possess adequate surplus capacity to meet the needs of the current population and accommodate demographic growth. Furthermore, the island of Grande-Comore has an estimated renewable water supply of 1.2 billion m<sup>3</sup> per year, with 1.1 billion m<sup>3</sup> derived from groundwater. Current exploitation of groundwater, surface water and rainwater collection accounts for 0.5% and 1.9% of the total renewable volume.

#### G. Agriculture and food security

18. The economy is not very diversified and is based on the agricultural sector, which generates 33.5% of GDP. The country's trade balance is negative, with a deficit of 20.7% of GDP. The primary sector (agriculture, fishing and livestock breeding) accounts for 46% of GDP, against 12.4% for the secondary sector, and provides 57% of total employment, 62.7% of which is held by women. It provides around 90% of export earnings from a very limited range of cash crops (vanilla, cloves and ylang-ylang), which are heavily affected by market fluctuations<sup>11</sup>. Despite the importance of agriculture in the Comoros economy, 75% of the country's food requirements are met through imports.

19. The low level of agricultural production can be explained by a number of factors: i) the small useful agricultural area, less than 100,000 hectares; ii) the complete absence of mechanized tillage, limiting the area farmed; iii) the isolation of production areas; iv) difficulties in accessing seeds and other agricultural inputs due to inadequate credit system; v) insufficient irrigation infrastructure for off-season production; vi) the weakness of agricultural extension and applied research systems; vii) the aging farming population<sup>12</sup>.

20. **The** clearing of forest areas for agriculture has also aggravated soil erosion and degradation and contributed to the depletion of water resources. Extreme events such as Cyclone Kenneth, which hit the archipelago in April 2019, caused agricultural losses estimated at 60% of food crops and 30% of cash crops.

21. Nearly all arable land has been appropriated for use. In Grande Comore and Mohéli, the proportion of cultivated land to potential is 70%. This rises to 80-90% for Anjouan (FAO/BM, 2013). Throughout the entire territory, only 43% of cultivable land is arable and 30% is occupied by permanent crops. Annually, agricultural land area decreases due to factors such as soil degradation and urbanization (FAO, 2007)<sup>13</sup>.

22. The Comoros does not suffer from chronic famine. However, the prevalence of food poverty (proportion of the population unable to meet the minimum caloric intake (< 1800 Kcal/day)) remains very high, affecting 25% of the population. The same applies to the prevalence of food insecurity, which affects 35% of the population<sup>14</sup>.

23. Vulnerability to natural disasters has a direct impact on food supply risks and availability. The country has suffered prolonged droughts (80% dry years, 20% wet years, from 1991 to 2000), an overall decrease in rainfall over the last few decades, a rise in average annual temperatures, and a shift in seasons.

24. International crises and conflicts have had a direct impact on food security in the Union of the Comoros, particularly before the Russian-Ukrainian crisis. Prior to this event 22.4% of the population was severely food insecure, and 22% moderately so (INSEED, 2020). The situation has since been exacerbated by the ongoing conflict, in 2022, it was reported that around 33% of Comorians were in absolute food poverty, and around 31% of children were stunted and 25% underweight<sup>15</sup>.

#### H. Preliminary gender assessment

25. A preliminary gender assessment was carried out during the preparation of this concept note and

<sup>9</sup> PAN/LCD

<sup>&</sup>lt;sup>12</sup> COMPACT 2023-2028

<sup>&</sup>lt;sup>13</sup> PAN/LCD

<sup>&</sup>lt;sup>14</sup> Commissariat Général au Plan. 2020. Voluntary national report of the Union of the Comoros to the High-Level Political Forum on Sustainable Development, 2020 edition.

<sup>&</sup>lt;sup>15</sup> Ditto

the findings of the assessment are being integrated into the project activities and will be reinforced by the full gender assessment to be carried out at the full project proposal stage.

26. **Legal framework.** The country has ratified the main international instruments on women, in particular the Convention on the Elimination of All Forms of Discrimination against Women (1994) and the Protocol to the African Charter on the Rights of Women (2004). The Union of the Comoros has ratified them without any reservations, undertaking to apply them as soon as they have been ratified. The Union of the Comoros joined the Beijing Platform in 1995, the African Union's Vision 2063 and the United Nations' 2030 Agenda for Sustainable Development, reflecting the political will of its leaders to promote gender equality and the empowerment of women and girls.

27. At national level, the 2018 Constitution confirms and guarantees women's rights, equal remuneration for equal work and the right of access to local and national political bodies. The Family Code sets 18 years as the minimum legal age for marriage and prohibits forced marriages. The Labour Code prohibits gender-based discrimination in recruitment and all other decisions relating to working conditions. The Labour Code protects pregnant workers and combats harassment, shifting the burden of proof to the alleged perpetrator. The law on the general status of civil servants condemns all forms of discrimination. The Electoral Code provides for the same right to vote and stand for election for both genders, and the law on the organisation of municipal elections requires both genders to be equally represented on municipal lists.

**28.** Effectiveness of law enforcement. The analysis of the texts revealed, on the one hand, inconsistencies between the texts adopted and, on the other hand, a lack of conformity of these texts with international instruments. For example, the Family Code grants men the right to polygamy, the moral and material leadership of the family, and the right of repudiation, while a woman seeking an out-of-court divorce must pay her husband compensation (Khol). The Nationality Code allows only men to transmit their nationality to their foreign wives. These provisions contradict the principle of equality between men and women as stated in the Constitution. The reason for these inconsistencies lies in the fact that, due to the specific history of the Comoros, modern law coexists with customary law and Muslim law. These various sources of Comorian law are not always consistent with each other and may come into conflict. For example, even though modern law recognises equality, it conflicts with other legal sources (such as customary law) and fails to assert itself. Religion and tradition sometimes set themselves up as the reference standard. This situation delays the elimination of certain gender inequalities and makes it difficult to implement policies aimed at gender equity and equality.

29. Policy framework. The Union of the Comoros has adopted the 2017 National Gender Equity and Equality Policy (PNEEG2), which consolidates the achievements of the previous policy (PNEEG 2007). The policy has the following objectives: (i) to remove economic and social obstacles so as to promote the participation of the entire population, regardless of gender, in economic development initiatives; (ii) to enhance the value of women's activities, which contribute to wealth creation; (iii) to increase opportunities so as to eliminate gender disparities and improve their capabilities; (iv) to effectively coordinate the various institutions with a view to training and informing. However, the analysis of the gender equality and equity situation carried out in 2017 as part of the update of the 2007 National Gender Equity and Equality Policy reveals that the values, practices and modes of social organisation severely limit the effects of the actions undertaken to reduce gender disparities and inequalities in Comoros. The National Gender Policy recognizes the obstacles to full equality of rights between men and women due to the coexistence of three types of law: positive law, Muslim law and tradition. In this context, the PNEEG2 defined 5 new priorities: i) strengthening the legal and institutional framework for promoting gender equality, ii) integrating this dimension into public policies, iii) empowering women by promoting their activities and supporting entrepreneurship, iv) involving women in decision-making bodies through political and legislative measures, and v) reducing gender-based violence. These priorities have been taken up by the various economic and social development policy frameworks of the Union of the Comoros, including in particular the Strategy for Accelerated Growth and Sustainable Development (SCA2D) 2018-2021 (O.S.14. Promoting gender equity and equality, included in Axis 3: Consolidation of governance and promotion of state based on the rule of law), the Plan Comores Émergent 2020 - 2030, one of the specific objectives of which is to promote the health of young people and adolescents and combat all forms of gender-based violence, exploitation and exclusion; and the Interim Development Plan 2020 - 2024 which, in terms of gender equality, sets the objective of seeing the gender equality index increase over the decade 2020-2030, with this index standing at 0.25 in 2019. It should be noted that the gender index in Africa has been limited to three dimensions: the economic dimension, the social dimension, and the dimension of empowerment and representation (both political and institutional).

30. **Gender, employment and economic activities.** Although women account for around half of the total population (49.6%), they are still under-represented at all levels, except in the agricultural sector, where they hold 63% of jobs in food production, market gardening and poultry farming. They do very little in marketing, unlike in the fishing industry, where they are more involved in selling fish. But these areas of activity are still informal, and informal and insecure employment is more common among women. For example, more women (56.1%) than men (47.5%) are self-employed, and 47% of the unemployed in Comoros are women. On the labour market, women's participation is half that of men, and women hold only 32.5% of jobs in the public and semi-public sector, generally in subordinate positions. Only 4.8% of working women are employers.

31. **Land ownership.** Matrilineal filiation allows Comorian women, generally the eldest, to inherit land and houses (manyahuli), which form an undivided patrimony handed down from mother to eldest daughter. But actual use and control remain in the hands of men: husbands, brothers, maternal uncles. Women inherit land and productive assets from their fathers and mothers, but the management of these assets involves the man as head of the family. In 2017, 32% of women owned land, compared with 58% of men. This can be explained by the institution of the "grand marriage" custom, which sees "accomplished men" (mdrou mdzima) become official decision-makers in the city, while women are confirmed in their position as head of the household. In this context, customs hinder rural women's use of their land to access credit or capital.

32. **Gender, environment and climate change.** The impacts of climate change (land and forest degradation, erosion, water stress, natural disasters) are leading to a scarcity of resources, making it more difficult for women, whose livelihoods in rural areas depend largely on natural resources (water, forest products, agriculture), to carry out their activities. Women's ability to adapt to climate change is undermined by their lack of access to the economic and productive resources outlined above. The NDC recognizes the importance of gender mainstreaming in climate change adaptation policies, and notes that the National Emergency Preparedness and Response Plan has taken gender into account in the education and protection sectors. The NDC is committed to improving the participation of women and all other vulnerable groups in the planning and decision-making process, as well as in capacity-building in terms of education, training and access to technologies for adapting to climate change.

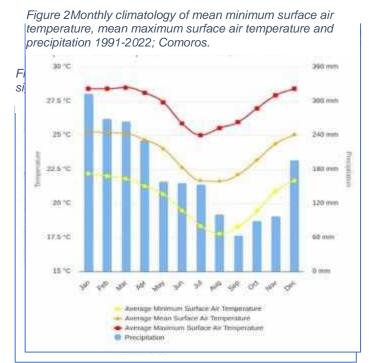

#### I. Climate change

#### Historical climate trends

- 33. The country has a humid tropical climate influenced by the sea, with two main seasons:
  - A warm and humid southern summer season, from mid-November to mid-April, with an average temperature of around 27°C at low altitudes, with highs between 33 and 35°C and lows around 21° and 24°C;
  - A cool, dry southern winter season from mid-June to mid-October, with an average temperature of 23°C at low altitudes and maximums between 27 and 29°C.

34. The Comoros is also subject to north to north-westerly monsoon winds known as "kashkazi", which are variable and weak, but stronger in January and February (the hottest months). Comoros ranks 97th on the global climate risk index for 2021. The frequency of extreme climatic and meteorological events such as tropical storms, floods, heat waves and droughts, landslides, volcanic eruptions and droughts has increased slightly and are the main hazards impacting the Union of the Comoros, causing both human and material damage. These hazards are likely to seriously compromise the development efforts undertaken by the country in recent years and accentuate the vulnerability of certain ecosystems and groups of already fragile populations.

35. The graph below shows average monthly minimum, mean and maximum temperatures over the period 1991-2022, as well as average monthly precipitation over the same period<sup>16</sup>.

36. **Temperatures.** The average temperature varies between 21.62°C and 25.26°C. The hottest months are June, with an average temperature of 25.26°C, July with an average temperature of 25.19°C, and August with an average temperature of 25.12°C.

37. Historical data for the period 1951-2020 show an upward trend in mean temperature.

38. As shown in Figure 2, the trend for the period 1951-2020 is an increase of 0.11°C per decade. The trend for the1970-2020 period is an increase of 0.16°C per decade, while the trend for the1991-2020 period is an increase of 0.22 per decade. We can thus see that the temperature increase trend is stronger, rising from 0.11°C to 0.22°C.

39. **Precipitation.** The wettest months are January, February and March, with monthly averages of 313mm (January), 269mm (February) and 264mm (March). September, October and November are the driest months, with average rainfall of 64 mm, 90 mm and 98 mm respectively.

<sup>&</sup>lt;sup>16</sup> https://climateknowledgeportal.worldbank.org/country/comoros

40. As Figure 3 shows, precipitation is tending to fall. While over the period 1951-2020, the downward trend is -25.28mm per decade, it is -51.22mm per decade for the period 1971-2020, but +77mm per decade for the period 1991-2020. However, the latter trend would not be significant (77% probability vs. 98% for the other trends).

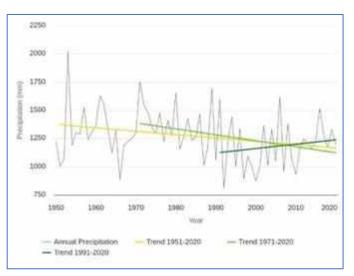

Figure 4 Annual rainfall trends with trend significance by decade 1951-2020 Comoros

41. The annual trend in the maximum number of consecutive wet days for the period 1951-2020 shows a downward trend, as shown in Figure 3, with -2.84 consecutive wet days per decade.

42. The maximum number of consecutive dry days for the period 1951-2020 (Figure 5) confirms the above trend in that this number would increase, with a very high probability, by around 1.19 days per decade.

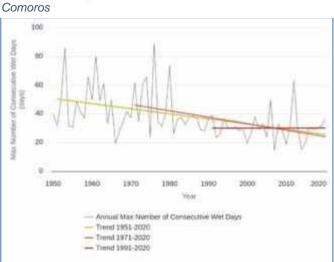

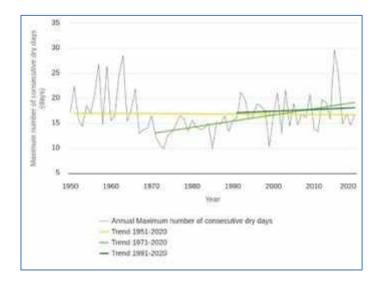

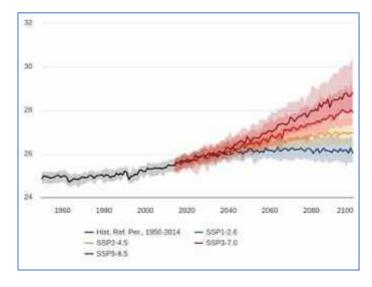

Figure 5Annual trends in maximum number of consecutive wet days with significance of trends by decade 1951-2020;

Figure 5 Annual trends in the maximum number of consecutive dry days, with significance of trends by decade 1951-2020; Comoros

#### **Climate projections**

Figure 6 Projected mean surface air temperature (ref: period 1994-2014) Multi-model ensemble

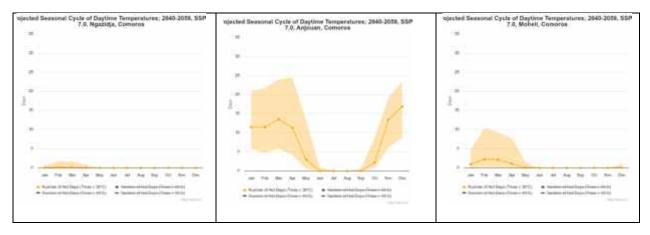

43. **Temperatures**. Average temperature projections vary from model to model but are always on the rise. Thus, according to the SSP3 7.0 model, the average temperature should increase by one degree in 2050, compared with the reference year 2014. Climate projections obtained using other global climate models show that mean annual temperature is set to rise by 0.8 (RCP 2.6) to 2.1°C (RCP 8.5) by 2060, and by 1.2 (RCP 2.6) to 3.6°C (RCP 8.5) by 2090.<sup>17</sup>

44. **The extreme heat conditions**. The season cycle allows to understand when in the year specific threshold conditions are more likely to be surpassed. Th duration of the "heat season" is likely to increase

<sup>&</sup>lt;sup>17</sup> Union des Comores, Ministère de la Production, de l'Environnement, de l'Energie, de l'Industrie et de l'Artisanat. Contributions Déterminées au niveau National de l'Union des Comores (CDN actualisée). Synthesis report, 2021-2030

in future decades. The below projected seasonal cycle of daytime temperatures, for the 2040-2059 period, highlights the differentiated projections between the three islands, Anjouan being the most affected by the successive months with high counts of heat.

#### Figure 6: Projected Seasonal Cycle of Daytime Temperatures: 2040-2059, SSP 7.0, Comoros

45. **Precipitation**. Projections for average annual precipitation show a wide range of changes, covering both negative and positive changes. Seasonal projections foresee a reduction in precipitation during April to December to November and an increase during the rainy season, particularly the months of January to March. According to the SSP3 7.0 scenario, average annual precipitation is set to increase by 1% in 2050. According to the IPCC, through the projections of the Atmosphere-Ocean General Circulation Model (AOGCM), climate change scenarios for the small islands of the Indian Ocean, for the period 2040-2069, indicate:

An increase in average annual precipitation of 3.1% (+ or - 0.45%) However, the decline varies between -2.6% and -1.8% during dry periods (June-August)

#### J. Impacts of climate change

46. The impacts of climate change on agriculture, livestock and water resources have been identified in the National Adaptation Programme of Actions (NAPA) and are summarized in the table below.

Sector	Impact		
Agricultural resources	<ul> <li>Delayed fruit ripening due to prolonged drought and high temperatures;</li> <li>The reproduction cycle of crop pests coincides with the harvesting period and leads to crop destruction.</li> <li>Appearance of new diseases such as the coconut whitefly (<i>Aleurotrachelus atratus</i>) leading to a drop in production and income;</li> <li>Whitefly also deposits fumagin on associated crops (vanilla, banana, etc.), compromising photosynthesis.</li> <li>Development of cercosporiosis (<i>cercorporella fujiensis</i>) on banana, resulting in major crop losses, reduced income and increased food insecurity.</li> <li>Land degradation accelerated by climate variability</li> <li>Reduced grazing due to grass desiccation caused by prolonged drought;</li> <li>Fallow land disappears, limiting forage production capacity.</li> <li>Diminishing water resources reducing watering possibilities;</li> <li>Under-nourishment of livestock and high susceptibility to parasitic attacks and</li> </ul>		

Table	1:	Impact	of	climate	change
-------	----	--------	----	---------	--------

	epidemics
Fishing resources	<ul> <li>Low level of recovery of demersal species,</li> <li>Steady decline in catch size.</li> <li>Abnormal rise in ocean temperatures leading to high coral mortality.</li> <li>Coastal erosion and accelerated decline in inshore fishing.</li> <li>Substantial post-harvest losses due to high temperatures, lack of product preservation facilities and limited outings during cyclones and heavy rains.</li> <li>The result is a chronic shortage of fish on the market.</li> </ul>
Water resources	<ul> <li>Climate variability has a negative influence on the quantity and quality of water resources through reduced rainfall.</li> <li>Variations in rainfall, seasonal shifts and prolonged droughts lead to early water shortages, and worsen hygiene conditions.</li> <li>High temperatures increase actual evapotranspiration, reducing the rate of groundwater recharge.</li> <li>In Grande-Comore, rising sea levels increase the salinity of the water table.</li> <li>Anjouan and Mohéli are fed mainly by river water: the decline in rainfall is reducing the hydrographic network.</li> <li>The quality of river water is altered by the products of erosion, discharges of faecal matter, household waste and others.</li> </ul>

47. Moreover, sea level is expected to rise by 4 mm per year over the next fifty years, corresponding to a potential average rise of 20 cm by 2050, twice as much as the rise observed over the last hundred years  $(20 \text{ to } 25 \text{ cm})^{18}$ .

#### K. Vulnerabilities in the national strategy to combat climate change

48. Climate risks are numerous and their impact can vary from one island to another. The table below shows the vulnerability of each island to climatic risks.

Table 2. Ri	isks and	vulnerability	1 of the	islands
Table 2. RI	SKS allu	vuinerability		isianus

Island Risk	Grande Comore	Anjouan	Mohéli
Sea level rise	Some coastal areas, especially in the eastern part of the island	Coastal areas (particularly the peninsula and eastern part of the island)	Coastal areas, especially eastern parts of the island
Tropical cyclones	No major risk for the Union of the Comoros as protected by Madagascar, but winds and storms	South-east of the island opposite Mayotte	No major risk for the Union of the Comoros, protected by Madagascar, but winds and storms all over the island.
Flooding	Southwest	Presqu'île: Bimbini, Vassi, Nord: Hajoho, and Centre Est: Domoni West coast: Pomoni and Moya	Coastal areas mainly, northeast (Fomboni), northwest Miringoni, Ouallah
Landslide	Southwest and southeast flanks of the Karthala massif	Southwest (Pagé to Maraharé; Moya)	North
Ocean upwelling	North and North-East; Central and South	South and North	Coastal zones
Coastal erosion	Southeast (Foumbouni) and Northwest	Southwest (Pagé to Pomoni) and Northwest (Domoni, Ouani- and central east coast)	Coastal areas, especially coastal - East (Fomboni, Djoiézi), and Northwest, Miringoni
Drought	Important West-central coastline and	North part	North part

<sup>&</sup>lt;sup>18</sup> Updated CDN.2021.

	northern part of the island		
Salinization of soils and drinking water supplies	Coastal zones	Southern coastal areas	Coastal zones
Soil erosion	Whole island	Whole island (especially west, east and south)	Whole island (especially in watersheds)
Deforestation	Important in all forested areas from the north to the south of the island, especially in the eastern part.	Forested areas, eastern part of the island	Forested areas all over the island

#### Planned adaptation measures

49. The table below presents the adaptation measures outlined in the updated 2020 NDC, focusing on the sectors most vulnerable to the effects of climate change. ECO-YOUTH will directly contribute to the achievement of some of the NDC's adaptation measures, as shown in the table below

Table 3: Main ECO-Youth foreseen contribution to the NDC planned adaptation measures by 2030

Sector	Adaptation actions	ECO-YOUTH foreseen actions
Agriculture and livestock	Developing a climate-smart, resilient agricultural policy	Institutional support to the Ministry of Agriculture, Fisheries, Livestock and Food (MET) for the integration of climate change adaptation into the relevant sectoral policies and strategies (ECO- Youth Component C, Outcome C.1: Support for policy instruments and the institutional framework)
	Development of agro-pastoral irrigation	Creation of climate-resilient infrastructures in the agro-sylvo-pastoral and fisheries sectors
	Set-up a nationwide early warning and intervention system for the emergence of new bovine or caprine diseases.	
Biodiversity and	Extension of the area with protected status	
forests	Extension of reforested area	Reforestation activities
Fishing and coastal and marine	Monitoring and restoring marine and coastal ecosystems	
ecosystems	Raising awareness and protecting fishermen from climatic hazards	Awareness-raising activities to support the creation of climate-resistant infrastructure and enable young entrepreneurs in the fishing industry to empower themselves. (Component A, Output A.2.1)
Water resources	Population access to an improved water source	Creation of climate-resilient infrastructures in the agro-sylvo-pastoral and fisheries sectors (Component A, Output A.2.1)
	Dissemination and adoption of the principle of integrated water resource management	Capacity building on sustainable resource management through the CRDE's activities (Component A, Outcome A.1 Strengthening and diversifying the training offer)
Integration and	Raising awareness of the impact of CC	Component A, Outcome A.1 Strengthening and

a	wareness-raising	Capacity building at all levels to define and implement CC adaptation measures	diversifying the training offer; Outcome A.2. Development of entrepreneurial and
			employment initiatives

#### L. Intervention area and target groups

50. **Area of intervention**. With a national scope, ECO-Youth will operate in the three islands and overlap geographically with IFAD's FORCE-Jeunes project. This overlap aims to establish a foundation for the rapid profiling and selection of the initial applicants for ECO-Youth courses. Additionally, it seeks to enhance job sustainability by incorporating climate change adaptation into the profiling of jobs and youth businesses, ultimately fostering resilience within the sectors

51. ECO-Youth will operate in 66 poor or vulnerable villages or localities on the three islands, 22 on Anjouan, 17 on Mohéli and 27 on Ngazidja (Grande Comore), in the same configuration as Force-Jeunes. This targeting represents 20% of the country's localities and is delineated within eight poles of concentration (PCs), two in Grande Comore and three on each of the islands of Anjouan and Mohéli. These PCs are territorially circumscribed within the zone of influence of the Centres ruraux de développement économique (CRDE), as shown in the table below.

Concentration hub	No. of locations	Proportion
Grande Comore	·	
1 Mbadjini Sud zone - Simboussa CRDE	10	
2 Bambao zone (Cent-e) - Sereheni CRDE	17	
Sub-total Gde Comore and proportion island	27	13%
Anjouan		
3. Nyumakele High and Intermediate Zone - M'rémani CRDE	11	
4. Zone Sma - Boungweni CRDE	7	
5. Plateau Koni and Mjilimé zone - Tsembehou CRDE and Bambao Mtsanga CRDE	4	
Subtotal Anjouan and proportion island	22	24%
Mohéli	·	
Zone Djando - CRDE de Mibani	6	
Zone Mledjele - CRDE de Wallah	6	
Zone Centre de Fomboni – CRDE de Fomboni	5	
Sous-Total Mohéli et proportion île	17	74%
Total Force-Jeunes et proportion pays	66	20,4%

Table 1: Distribution of clusters

52. **Target group.** The project target's beneficiaries are rural poor aged between 15 and 35 (33.7% of the population) who have limited or no integration into the productive and wealth-creation processes, according to the following profiles:

- Youth without vocational training but actively engaged in family-based agro-sylvo-pastoral and fisheries activities;
- Young graduates or those with a minimum level of training, unemployed or unemployed;
- Young people fully engaged in rural economic activities in search of development.

53. In all, ECO-Youth will directly target around 6,000 young people from some 4,000 rural households

with low incomes or vulnerable to poverty. Within these households, it will indirectly impact more than 20,700 people. According to the preliminary breakdown, which will be refined during the design phase, the project will reach 1,740 young people in Anjouan (29%), 3,208 in Grande Comore (53.5%) and 1,052 in Moheli (17.5%).

54. In line with the project's gender focus, women will account for 50% of the young people directly benefiting.

55. It is estimated that the 6,000 young people will be sensitized, profiled and oriented through the project. Among them, 4,500 individuals are expected to enrol in training courses including pre-vocational, junior and senior levels. From 4,450 young people who will complete the training courses, 3,250 will be able to present project ideas in the various agro-sylvo-pastoral and halieutic, craft and services, digital and green economy. Additionally, 1,200 participants would be considered as candidates for salaried employment.

56. The targeting approach is based on the principle of social inclusion, in line with national standards favouring the integration of people with disabilities (PWD) into economic activities. This category will represent 1.5% of young people, or around 90 individuals. The inclusion approach will be promoted through the innovative Gender Action Learning System for Gender equality and climate change adaptation (GALS+), which promotes empowerment, adaptive capacities, climate resilience, nutrition and gender equity in associations, cooperatives, and communities. It will be integrated into training modules at training, learning and incubation centres.

57. The project will use a targeting mechanism to distinguish between the three groups of direct beneficiaries, in particular young rural women and men who will be able to follow the training and entrepreneurial support courses or recruited as salaried employees. The three groups are defined as below:

- Young people aged 15 17 (pre-professional): young people without vocational training, with or without education, but with a minimum level of literacy; involved in agro-sylvo-pastoral and fisheries production activities or related activities on family farms or in POs located in the PCs; often employed as agricultural or non-agricultural labour, apprentices in craft workshops, etc.
- Young people 18 35 (juniors): young people with diplomas or a minimum level of training, unemployed or in a situation of unemployment, who could be hired/employed on family farms or still looking for economic activity in rural areas.
- Young people 18 35 (seniors) young people fully engaged in economic activities in search of development. Young people in this category aim to increase their income and, to do so, are particularly looking for: (i) the training they need to master the production, technical and managerial requirements linked to their development objectives; (ii) support, advice, and financial services; (iii) secure and sustainable access to the market and to modern marketing and digitalization technologies.
- 58. The quota system will also be used to ensure that young women are targeted. Awareness-raising and communication sessions specifically for young women will be organised to ensure strong interest on their part.
- 59. The targeting strategy aims to: (i) ensure that young people, and especially the most vulnerable, are the recipients of project support; (ii) identify motivated young people in the agricultural sector to facilitate networking and job market stimulation; (iii) establish gender equality in POs and companies, through the use of innovative, participative and interactive methodologies such as GALS+; (iv) promote agro-sylvo-pastoral and halieutic and processing models favourable to young women. To this end, the targeting approach will involve, in each PC, POs, youth organizations (youth for peace; women's associations, associations of young women entrepreneurs, etc.), associations of disabled people, associations specializing in the education and integration of young people (ASCOBEF, ONG 2 Mains, etc.) and local authorities, taking into account their representative and inclusive nature.

# **Project Objectives:**

#### List the main objectives of the project.

**Objective**. The overall objective of ECO-Youth is to contribute to poverty reduction and the strengthening of rural communities' resilience and adaptation to climate change.

60. The development objective is to improve young people's access to decent jobs through the development of entrepreneurship integrating adaptation to climate change into the economic enhancement of agricultural, livestock and fisheries food systems.

## **Project Components and Financing:**

Table 2. Project components and sub-components
--

Project/Program Components	Expected Concrete Outputs	Expected Outcomes	Amount (US\$)
components	Output A.1.1	Outcomes	1,730,000
Component A. Capacity building and green	Output A.1.1         Three Rural Economic Development Centres         (CRDE) recalibrated         Output A.1.2         Technical platforms for training, apprenticeship         and incubation are strengthened	A.1 Strengthening and diversifying the training offer	1,730,000
entrepreneurial and employment initiatives	Output A.2.1 Climate-resilient infrastructures empowering young agro-pastoral and fisheries entrepreneurs. Output A.2.2 Young people trained in sustainable rural trades for income generation	A.2. Development of entrepreneurial and employment initiatives	2,990,000
Component B. Green business partnerships and	Output B.1.1 Stronger integration of young people into employment and business partnerships Output B.1.2 Bringing partner companies up to environmental standards	B .1. Partnership with the private sector	345,000
sustainable employment opportunities	Output B.2.1 A green financing mechanism for young agripreneurs' business plans is set up Output B.2.2 Climate risk integrated into financing mechanisms for young agripreneurs	B.2 Financing young agripreneurs	2,700,000
Component C. Strengthening the policy and institutional	Output C.1.1         Relevant sectoral policies and strategies         supported         Output C1.2         Key institutions supporting rural youth         businesses strengthened	C.1 Support for policy instruments and the institutional framework	120,000
framework for rural youth employment	Output C 2.1 A M&E strategy put in place Output C 2.2 Knowledge products created and disseminated	C.2. Monitoring, evaluation and knowledge management	457,978
Total cost of compon			8,342, 978
Project/program imple			873,612
Total project / program cost			9,216,590
Project/program cycle management fees invoiced by implementing entity			783,410
Amount of funding requested			10,000,000

# **Projected Calendar:**

Indicate the dates of the following milestones for the proposed project

Milestones	Expected Dates
Start of Project Implementation	January 2026
Mid-term Review	June 2029
Project Closing	January 2032
Terminal Evaluation	June 2032

# PART II: PROJECT JUSTIFICATION

A. Describe the project components, particularly focusing on the concrete adaptation activities of the project, and how these activities contribute to climate resilience. For the case of a programme, show how the combination of individual projects will contribute to the overall increase in resilience.

61. ECO-Youth includes the following components and sub-components:

# Component A. Capacity building and green entrepreneurial and employment initiatives

62. Agricultural entrepreneurship will improve employment for young men and women in the Comoros, and ensure their participation in wealth creation at all stages of the value chain for climate-smart agriculture. To achieve this, it is essential to strengthen the infrastructure and equipment of national structures such as the CRDE and ENPMM, as well as the technical platform for training and support for agricultural entrepreneurship, and to upgrade training content in line with climate change adaptation.

63. Despite the diversity of players, the Rural Economic Development Centres (CRDE), under the operational supervision of the Union of the Comoros' Ministry of Agriculture, Fisheries, and Handicrafts, remain the main provider of advisory services for farmers and agricultural professionals.

64. CRDE's mission is to cover a wide range of thematic areas, from producer demand for advisory support to the promotion of facilitation tools for the production, supply and purchase of services. The CRDE network also plays a role in centralizing information for the management and dissemination of agricultural strategies defined by the Government of the Union of the Comoros. However, the CRDEs suffer from insufficient resources to fulfil their mandates and ensure a greater contribution to the development of entrepreneurship and the strengthening of climatic resilience, which are among the major challenges facing Comorian agriculture. Upgrading the selected CRDEs would make them reference centres for partnerships with the private sector and civil society to promote concrete, concerted action in terms of sustainable agricultural development for the benefit of young people and women.

## Sub-component A1 Strengthening and diversifying the training offer

**Output A.1.1:** Three Rural Economic Development Centres (CRDE) are recalibrated **Output A.1.2:** Technical platforms for training, apprenticeship and incubation are strengthened

65. In light of the demand for training and the capacity of existing facilities, ECO-Youth will focus on improving the training and incubation offer through two main activities (AP): (i) the restructuring and modernisation of three CRDEs with the aim of promoting one reference centre per island in the climate-resilience of the agricultural value chains; (ii) targeted support for the modernization of training,

apprenticeship and incubation technical platforms in the same climate change adaptation approach.

#### (i) Recalibration of three CRDEs

66. The project will support the strengthening of the infrastructure and technical capacities of the CRDEs, to improve access to agricultural advisory services and develop rural entrepreneurship in the Comoros for the benefit of young people and girls. To this end, the project will undertake a preliminary socioeconomic study to identify attractive rural occupations for young people.

67. In this respect, the results of the "Agro-Hub" project carried out by the ILO in 8 countries showed that most self-employed young people in the agriculture sector (around 70-80%) prefer segments like input supply, aggregation, processing, marketing and services over production. In comparison to the production segment, these other segments appear to carry less risk. The preliminary socio-economic study should identify the segments of the agricultural value chain that could attract the youngest people, and the awareness-raising actions to make young people aware of the importance of agricultural production. The recalibration of the CRDEs is in line with the government's priorities for agricultural development and food security set out in the Union of the Comoros' Compact 2023-2028 for agriculture and food. The CRDEs are targeted as institutions providing training, advisory support and local supervision for producers and professional organizations, which are to host the bulk of the Compact's activities. Several technical and financial partners (TFP), such as the World Bank, the French Embassy and the FAO, have already supported the renovation and operationalization of seven of a total of nineteen CRDEs. ECO-Youth will help to ensure that the training and professional integration functions in the agro-sylvo-pastoral production subsectors of three CRDEs are permanently anchored.

68. In the fisheries sector, the reference CRDEs, supported by ECO-Youth, will contribute to the sustainable exploitation and development of fisheries resources by improving conservation, processing and marketing systems, and promoting entrepreneurship in these areas.

69. The process of recalibrating the CRDEs identified at this stage will include:

- a. Identification of partner CRDEs;
- b. CRDE training curricula and trainers integrating climate change adaptation, including agroforestry, waste management/processing, composting, meteorological data processing and analysis, etc.; and
- c. Integrating the GALS+ method, adopted and applied by IFAD, which aims to give women and men greater control over their lives, and promotes equal rights and opportunities by empowering the most vulnerable women and men to develop, negotiate, implement, and monitor their own plans to improve productivity and production quality, adaptive capacities, climate resilience, nutrition and increase their incomes. The approach aims to reduce the risks to their livelihoods by creating greater equality between men and women within households and increasing women's participation in economic decision-making.

70. A 2-hectare area will be established in each CRDE to serve as a learning, demonstration and application field for plant and animal production. This will be a place for collective, hands-on learning, enabling training beneficiaries to improve their critical analysis and decision-making skills. The proposed activities will be carried out directly in the field, notably in the form of problem-solving experiments, and will correspond to a particular local situation. This could include methods such as agroforestry, water conservation, soil management, improved seeds and integrated pest management practices, to improve the agricultural productivity and climate change resilience of production systems, crop diversification, and grazing land management.

#### (ii) Technical platforms for training, apprenticeship and incubation are strengthened

71. ECO-Youth will collaborate with selected private entities and bolster their equipment, training and apprenticeship facilities. During the design phase, these entities will be identified, consisting of micro and medium-sized enterprises capable of providing apprenticeship opportunities for young men and women. This selection process ensures that the collaborating entities possess the capacity to offer valuable skill-building experiences for youth in various sectors. Prior to the commencement of any collaborative efforts, Partnership agreements will be signed with each entity, including a practical curriculum of activities and skills to be taught to the apprentices. The young learners will also be enrolled into tutored learning schemes.

To support this initiative, the project will strengthen partnership with master craftsmen, trainers or model farms capable of accommodating and providing practical training opportunities for young participants. This collaboration will ensure that young learners receive hands-on experience and mentorship from experienced professionals in their respective fields. In preparation for these tutored learning schemes, the project will enhance the capacities of trainers and apprentice masters, with a particular focus on climate change adaptation measures within their professional activities. This capacity building will ensure that young learners receive well-rounded training, incorporating sustainable practices and knowledge of climate change adaptation strategies, and receive a certificate at the end of their training.

### Sub-component A.2. Development of entrepreneurial and employment initiatives

72. This sub-component will create favourable conditions for rural youth entrepreneurship and invest in training and professional integration. Two main activities will be carried out: structuring investments and training rural youth.

**Output A.2.1**: Climate-resilient infrastructures empowering young agro-pastoral and fisheries entrepreneurs

Output A.2.2: Young people trained in sustainable rural trades for income generation

# (i) Creation of climate-resilient infrastructures in the agro-sylvo-pastoral and fisheries sectors

73. Young people's entrepreneurial and employment initiatives in the agro-sylvo-pastoral and fisheries sectors will be supported by structuring investments that provide them with adequate and efficient services and infrastructures. Actions will be developed in synergy and complementarity with the implementation of the FORCE Jeunes project and ongoing initiatives developed by the government with the support of various partners (World Bank, French Cooperation, African Development Bank (ADB), Food and Agriculture Organisation (FAO), IFAD, etc.).

74. On each island, ECO-Youth will invest in infrastructure and equipment:

- Support for the blue economy through the implementation of fish aggregating devices (FADs): awareness-raising and organization around FADs, technical training for the construction of FADs, training in FAD maintenance and management mechanisms. The project will support the prospection and delimitation of fishing zones within a legal and sustainable framework, as well as the strengthening of the biological rest monitoring system. These measures will have a positive impact on the management of the environment and natural resources;
- To facilitate production, market access, and overall productivity, the project will develop market garden areas, construct post-harvest infrastructure such as storage warehouses and ecological cold rooms (CFE) in conjunction with market garden areas, rehabilitate transportation tracks, and support the establishment of agri-dealer shops, streamlining the agricultural value chain while improving access to high-quality inputs.
- The project will prioritize climate-resilient infrastructure and renewable energy use to reduce greenhouse gas (GHG) emissions and enhance community resilience to climate shocks and extreme weather, focusing on environmentally friendly practices such as constructing elevated storage facilities, resilient greenhouses, efficient drip irrigation systems, windbreaks, robust livestock shelters, solar energy solutions, and improved rural roadways to support sustainable agricultural development.

75. The structuring actions will be implemented in collaboration with institutions, the professional sector (private and cooperative) and civil society, according to their technical and institutional roles and mandates, while involving producers' associations/cooperatives, as well as young people and women living in the targeted villages.

#### (ii) Training young people in sustainable rural trades

76. The project estimates that 4,500 young people, aged between 15 and 35, will be trained in the

various schemes and courses. Ultimately, 3,250 youth will leave the training cycle with their business plans financed. The remainder will move on to salaried employment, mainly within the framework of the partnership with the Maison de l'Emploi (MDE). 3 training paths are planned, depending on the age of the beneficiaries: (i) an introductory or pre-professional training path for 15–17-year-olds; (ii) a junior path for young people aged 18 and over who wish to establish themselves as first-time entrepreneurs; and (iii) the senior path for young people with a certain seniority and experience in the business they wish to develop.

77. Implementation will consist of a series of interventions including facilitation and awareness-raising, identification, profiling and orientation of young people, and technical and vocational training for rural trades:

- Facilitation and awareness-raising. To enable young people on the three islands to find out about the project's activities and the opportunities available to them, awareness-raising activities will be carried out on a large scale, reaching around 7,000 young people over the life of the project.
- Identification, profiling and orientation of young people. Drawing upon a specialized system consisting of defined criteria, profile evaluations, and a validation committee, this intervention will be driven by awareness-raising efforts and seek to refine the orientations in line with the three pathways. In doing so, it aims to address the diverse needs of young people in accessing training, employment, and entrepreneurial opportunities.
- Technical and vocational training for young people. Depending on their profile, young people will be placed on one of three training and integration paths. The training, the precise content of which will be defined during the design mission, will include the basics of climate change and adaptation processes and capacity building in meteorological data processing and analysis, apart from technical and business management skills.

78. To achieve its employment objectives, the project will build partnerships with the Maison de l'Emploi (MDE) and the Chamber of Commerce, Industry and Agriculture.

79. It is estimated that the 7,000 young people sensitized will be profiled and oriented, and that 4,500 of them will enter training courses (pre-vocational, junior and senior). Of these, 3,250 young people will be able to present project ideas in the various agro-sylvo-pastoral and halieutic, craft, digital and green economy sectors. A further 1,200 young people will be considered for salaried employment. A total of 3,250 business plans will be prepared, including 2,250 for juniors and 1,000 for seniors.

## Component B. Green business partnerships and jobs.

80. Following on from the actions planned under Component A, ECO-Youth will continue to support young entrepreneurs by helping host companies to draw up business plans and ensure that they are bankable, as well as by providing follow-up support for financed business plans. The project's support for the companies concerned will focus on bringing them up to environmental standards and taking climate risk into account.

#### Sub-component B .1. Partnership with the private sector

#### Output B.1.1: Integration of young people into employment and business partnerships facilitated.

#### Output B.1.2 Support for the environmental compliance of private partner companies

81. **(i) Integrating young people into employment**. The integration of young people into employment will involve support for the development of business plans, which could be submitted for funding under the shared-cost mechanism provided for in subcomponent B.2.

82. The project will collaborate with skilled and competent partners for each selected young person who meets the eligibility criteria for support with developing quality business plans and applying for financing from credit institutions. Selected service providers, including training institutions, will assist ECO Youth beneficiaries in developing and finalizing their business plans. These SPs will also assist the young people to gather the necessary documents for the business plan and financing application. Once the business plans have been developed, they will undergo a quality control process through the project filter, including

selection criteria, before being submitted to the validation committee. The list of criteria will incorporate the environmental and social policy standards set by the Adaptation Fund. To ensure thorough quality control, the project may engage occasional international technical assistance as needed. ECO-Youth will establish a strategic partnership with the MdE to operationalize a rural youth placement desk, organized around four main functions:

- (i) Referencing all job offers in the productive sub-sectors promoted by the project and disseminating them on social networks;
- (ii) The creation of a database of young people trained on the various courses and their access to the private sector;
- (iii) Placement of trained young people with agri-SMEs within the framework of strategic partnerships with employers, the Chamber of Commerce and Industry, and the National Investment Promotion Agency. The placement activity will also offer opportunities for preprofessional internships or pre-integration into salaried employment.
- (iv) Ongoing monitoring and dissemination of job offers in the fishing, farming and livestock sectors.

83. **Promoting green jobs**. Regarding green jobs, the project will explore opportunities of economic and professional interest to young people in the agricultural production, entrepreneurship sub-sectors, and on skills development. To this end, the potential of social media platforms will be harnessed through the strategic utilization of LinkedIn, Facebook, and Instagram pages and groups. Similarly, communication by ECO-Youth actors/operators will involve the intensive use of profiles, videos, articles, and documents on these networks as well as on the Internet platform. All initiatives should clearly target green jobs (sustainable agriculture, climate-smart agriculture, etc.).

84. The project will develop a catalogue of green and blue job opportunities, based on a study carried out at the start of the project; and (ii) introduce a bonus aimed at rewarding initiatives that stand out for the creativity of their promoters and the originality of their projects.

#### (ii) Bringing private companies up to environmental standards

85. Society's expectations of sustainable development, transparency and responsibility have evolved in the face of increasing pressure on the environment from pollution, inefficient use of resources, inappropriate waste management, climate change, ecosystem degradation and loss of biodiversity. Production processes can no longer ignore their impact on the environment and the need to take climate risks into account. ECO-Youth will be working with the companies that will be hosting the young people, with the Chamber of Agriculture and with the relevant ministerial departments, to Integrate climate change resilience into corporate strategies, i.e. integrate climate resilience measures into operational plans and draw up business continuity plans that take extreme climate scenarios into account.

86. This support will enable companies to adopt weather- and disaster-resistant technologies and infrastructures and, more generally, to adopt recognized environmental standards and obtain, for some of them, environmental management certifications such as ISO 14001. We also need to ensure that supply chains comply with these standards. According to international experience, adopting good environmental practices can help reduce the use of raw materials, cut water and energy consumption by companies, and improve recycling or waste recovery.

87. At the design stage, collaboration with the Chamber of Commerce should enable the project to identify the companies operating in the value chains covered by the project, from primary production to processing and marketing. Activities to support the "greening" of Comorian companies will be modulated according to the nature of the activities and the size of the company concerned.

## Sub-component B.2. Green financing for young agripreneurs

**Output B.2.1:** A shared-cost mechanism for green financing of young agripreneurs' business plans is set up

**Output B.2.2:** Integrating climate risk into financing mechanisms for young agripreneurs

88. **Financing green business plans.** The project will set up a shared-cost mechanism for financing green business plans for the benefit of young promoters wishing to establish themselves as first-time entrepreneurs and young people with some seniority and experience in the activity they wish to develop.

The shared-cost mechanism will be designed with a distribution key differentiated according to the path taken. The financing scheme will be based on two instruments: the project's contribution in the form of a grant and a contribution from the beneficiaries.

89. A total of 3,250 young people should be financed, with a proportional breakdown by island, and with a high incidence of young people from the junior program (around 70%). A total of 1.000 (or 30%) young seniors will be proposed for financing, with the aim of developing an existing business, either to diversify it or to increase its size in order to achieve a larger market share. The more numerous junior target group to be financed is essentially made up of first-time entrepreneurs who are starting out on a professional career thanks to the ECO-Youth project.

The project's contribution is determined as part of the review and approval of its business plan by 90. the Approval Committee, whose composition and operating procedures will be determined during the design phase. This business plan is the result of a training program for young people, in particular juniors, or a retraining or facilitation process for business advisors in the case of seniors. With regard to the distribution key, juniors<sup>19</sup> contribute 10% of the cost of their business plans in kind or in cash, while seniors<sup>20</sup> contribute around 40%.

In terms of economic targeting, eligible entrepreneurial initiatives fall into several categories, 91. including agro-sylvo-pastoral and fisheries activities. The typology encompasses: (i) agriculture and agroforestry; (ii) livestock farming; (iii) fishing; and (iv) agricultural processing and trades. Environmental sustainability and climate change adaptation criteria will be applied to all sub-projects to be identified through community consultations. During the design mission, to help adapt to climate change effects and strengthen community resilience, key eligible grant windows will be assessed against the Adaptation Fund's Environment and Social Policy and the 15 Environmental and Social Policy (ESP) principles. Specific criteria will be defined and integrated into the criteria grid of the Approval Committee for youth business plans. During the Full Proposal design, the project will aim to avoid unidentified sub-projects and propose interventions relevant to the beneficiaries' needs.

92. Taking climate risk into account. ECO-Youth will carry out a preliminary study on how climate risk can be taken into account in the green financing mechanism presented above, for example in the form of insurance. This green financing mechanism, also covering climate risk, will be integrated into the Action Plan for financing measures to adapt to climate change, to be drawn up as part of the National Adaptation Plan (NAP) update<sup>21</sup>. Similarly, ECO-Youth will support the Government in building the capacity of the private sector in terms of adaptation options.

At this stage the process of supporting youth employment has been defined, as well as the target 93. groups (Young people aged 15 - 17 (pre-professional), without vocational training; Young people 18 - 35 (juniors)<sup>22</sup>, with diplomas, unemployed; Young people 18 - 35 (seniors) fully engaged in economic activities in search of development), and also the areas of activity in line with climate change adaptation priorities. The specific content of activities, in relation to considerations of sustainable natural resource management and climate change adaptation, will be fully defined at the design phase.

#### Component C. Strengthening the policy and institutional framework for rural youth employment

# Subcomponent C.1. Support for policy instruments and the institutional framework

<sup>&</sup>lt;sup>19</sup> Young people 18 - 35 (juniors) are defined as young people with diplomas or a minimum level of training, unemployed or in a situation of unemployment, who could be hired/employed on family farms or still looking for economic activity in rural areas.

<sup>&</sup>lt;sup>20</sup> Young people 18 - 35 (seniors) are defined as young people fully engaged in economic activities in search of development. Young people in this category aim to increase their income and, to do so, are particularly looking for: (i) the training they need to master the production, technical and managerial requirements linked to their development objectives; (ii) support, advice, and financial services; (iii) secure and sustainable access to the market and to modern marketing and digitalization technologies. <sup>21</sup> MAPETA. April 26, 2024. Workshop to launch the NAP update process.

<sup>&</sup>lt;sup>22</sup> Please refer to paragraph 57 for a detailed definition of the target groups

Output C.1.1: Relevant sectoral policies and strategies are supported

Output C.1.2: Key institutions supporting rural youth businesses are strengthened

94. In line with the PCE 2030 and sectoral policies (National Agricultural Investment Plan, National Gender Equity and Equality Policy, National Youth Policy, etc.) this sub-component will implement two main activities: (i) support for policies and strategies; and (ii) institutional strengthening.

95. **Support for sectoral policies and strategies**. ECO-Youth will support the review and updating of strategic frameworks and policies focusing mainly on youth, employment and gender, climate change adaptation, etc. The national youth policy (2017) highlights the major problems faced by Comorian youth. The policy document shows that support is needed in the legal, regulatory, institutional and operational spheres. The policy document is conceived as "...a framework document on which all public and private players, as well as technical and financial partners working in the youth and development sector, must base their actions", which makes all ECO-Youth support relevant.

96. Socio-cultural dynamics cause disparities between women and men. Aware of all these inequalities, the Government has recorded them in the National Gender Equity and Equality Policy (PNEEG 2017). It recognizes that "gender inequalities are a serious brake on the development and evolution of Comoros, to the detriment of both men and women. They compromise the chances of reducing poverty and are at the root of the country's slow economic growth and the low quality of life currently experienced."

97. In terms of employment in general, and in rural areas in particular, the Plan Comores Emergent (PCE) is based on a diagnosis of the failure of previous policies, with economic growth that is weak, volatile and insufficient to improve living standards and create sufficient decent jobs. Improvements are still needed in the implementation of the required actions.

98. ECO-Youth will support the development, review and implementation of policies relating to (i) employment promotion instruments; (ii) agricultural and rural development, with particular emphasis on the integration of young people and women, and adaptation to climate change; (iii) integrating rural entrepreneurship into training programs; (vi) improving the participation of women and young people in political dialogue; (vii) gender for the empowerment and social inclusion of young people and women living in rural areas; (viii) policy-making for enabling green job environment. Within this framework, the project will support the development and implementation of a gender strategy for sustainable rural development, the updating of the National Environment Strategy, the National Environment Policy, the Nationally Determined Contribution (NDC), the National Program for Adaptation to Climate Change (NAPA)), the National Youth Policy and the development of a National Strategy for Gender Mainstreaming in Rural Development.

99. **Strategic partnerships and institutional strengthening**. Assessments carried out as part of the NAP update process<sup>23</sup> highlight insufficient institutional capacity to implement climate change adaptation measures at all levels of government, as well as weak technical planning capacity. ECO-Youth will support the institutional strengthening of MET's General Directorate for the Environment and Forests, as well as the Directorate of Fisheries Resources and Agricultural and Livestock Strategies of the Ministry of Agriculture, Fisheries and Handicrafts, the Ministries in charge of Youth and Employment, Vocational Training and Integration, Gender Promotion, Economic Integration and other stakeholders. Institutional support will selectively target key institutions in the provision of business services to rural women and young people, in particular INRAPE, the Maison de l'Emploi as part of its Strategic Development Plan revised in 2022, the Union of Chambers of Commerce and Chambers of Agriculture, the employment consultation frameworks on each island and at Union level; networks of young agripreneurs; networks of POs/Cooperatives. This targeted support will facilitate the active participation of governing structures and beneficiaries in project implementation. A specific capacity-building program on integrating climate change adaptation into programs, plans and strategies will be developed and implemented for this purpose.

### Subcomponent C.2: Monitoring, evaluation and knowledge management

Output C 2.1:An M&E strategy is put in placeOutput C 2.2:Knowledge products are created and disseminated

100. Monitoring and evaluation. The project will set up a monitoring-evaluation system (MES) based

<sup>&</sup>lt;sup>23</sup> MAPETA. April 2024: Workshop to launch the NAP development process.

on the results-based management approach. The system's role will be to support shared understanding of the project, to improve management and efficiency, and to meet accountability, capitalization and learning requirements. It will make it possible to (i) measure the progress of project implementation, the achievement of expected outputs and outcomes, and the impact of interventions on target groups, and (ii) inform a list of basic gender indicators and age- and sex-disaggregated data.

101. Output data will be collected on an ongoing basis for beneficiaries and all project activities. Outcome and impact data will be collected on a sample of beneficiaries through baseline, mid-term and final surveys that will be aligned with IFAD's guidelines for the measurement of core outcome and impact indicators (IFAD Outcome and Impact Guidelines).

102. **Knowledge management and communication**. From the outset of the project, the National Coordination Unit will draw up a Knowledge Management and Communication Strategy with an operational implementation plan to capitalize on its experiences and innovations and enable knowledge sharing and scaling up, first internally within the project, then externally. Annual knowledge management and communication plans will be drawn up, budgeted and implemented at national and island level. As part of this strategy, monitoring and evaluation of the activities, products, effects and impacts of the project's interventions will form the basis of the learning and knowledge management process. The project will then seek to create a value chain between the implementation of activities, monitoring and evaluation, knowledge management, political commitment, institutional support and communication.

**B.** Describe how the project provides economic, social and environmental benefits, with particular reference to the most vulnerable communities, and vulnerable groups within communities, including gender considerations. Describe how the project will avoid or mitigate negative impacts, in compliance with the Environmental and Social Policy and Gender Policy of the Adaptation Fund.

103. Economic benefits. The project will facilitate access to production factors and resources, as well as to markets and services, notably by supporting agro-sylvo-pastoral and fisheries investments, as well as the creation of climate-resilient infrastructures to support the development of these investments. To this end the project foresees to invest about 1/5 of the total amount of the proposed (2.000.000 USD) in Climateresilient infrastructures to empower young agro-pastoral and fisheries entrepreneurs. Investments in climate-resilient infrastructure in the agro-sylvo-pastoral and fisheries sectors will yield numerous economic benefits. These advantages include the creation of income-generating activities for 6000 young people and the establishment of a financing mechanism for business plans that incorporate adaptation to climate change. These investments will lead to: (i) an increase in income for direct project beneficiaries through business development and salaried employment; (ii) an improvement in food and nutritional security for rural populations, thanks to an increase in the quantity and quality of food, vegetable, animal and fish production, and to nutritional education; (iii) an increase in added value, employment and economic opportunities along the targeted value chains, thanks to an increase in the share of marketed and processed production, as well as in the financing available to develop private initiatives and win-win partnerships; (iv) an increase in tax revenues and an improvement in the balance of trade as a result of reduced imports; (v) economic empowerment of rural women and young people. The establishment of a financing mechanism for young agripreneurs' business plans, integrating adaptation to climate change, will enable the production of stable income for young people, and women.

104. **Social benefits**. The project will generate social benefits by directly addressing youth unemployment through the creation of jobs and income-generating activities. The inclusion approach will be promoted through the innovative Gender Action Learning System for Gender equality and climate change adaptation (GALS+), which promotes empowerment, adaptive capacities, climate resilience, nutrition and gender equity in associations, cooperatives, and communities. The project will directly target 6,000 young people from around 4,000 rural households with low incomes or vulnerable to poverty. Within these households, it will indirectly impact more than 20,700 people. In line with the project's gender focus, women will account for 50% of the young people directly benefiting. Taking gender into account in business plan validation criteria will raise the social status of this vulnerable category of Comorian society. In addition, and

in line with national standards favouring the integration of people with disabilities (PWD) into economic activities, this category will represent 1.5% of young people.

Environmental benefits. The project aims to reduce vulnerability to climate change by 105. strengthening sustainable resource management through the creation of jobs, businesses and incomegenerating activities in the agriculture and fisheries value chains. Capacity-building for key institutions supporting young people in the creation of business plans will focus on integrating climate change adaptation and sustainable natural resource management issues into training and apprenticeship curricula. Environmental sustainability criteria will also be introduced into the analysis grid for business plan eligibility and the project will avoid unidentified sub-projects. Investments in climate-resilient infrastructure (around 2,000,000 USD) will also contribute to the sustainable management of natural resources. Where appropriate, mitigation measures will be applied and a site-specific social and environmental management plan will be prepared. In addition, the project will be developed in accordance with the Adaptation Fund's 15 Environmental and Social Policy (ESP) principles, which serve as environmental and social safeguards. To ensure full compliance with the Adaptation Fund's requirements, the project has undergone screening against these principles to concept note stage, and mitigation measures have been identified where necessary, addressing any potential risks or challenges related to environmental and social safeguards. The project meets the overall objective of the NAPA, which is to help reduce the adverse effects of climate change on people's livelihoods and on the most vulnerable areas, thereby increasing their resilience to climate change and variability.

#### C. Describe or provide an analysis of the cost-effectiveness of the proposed project.

106. During the project design phase, a complete cost analysis of all components and activities will be carried out, as well as an analysis of alternatives to ensure profitability. This analysis will assess the financial implications of each component, taking into account factors such as direct costs (training and skills development costs, investment in infrastructure (equipment, buildings), salaries and wages, operational costs (raw materials, services, maintenance) and indirect costs (administrative costs, monitoring and evaluation costs, opportunity costs (potential benefits lost by choosing this option over another). At the stage of the concept note, a draft estimation of the cost-effectiveness is presented below.

Without the project	Project benefits
Component A. Capacity building and green ent	repreneurial and employment initiatives
<ul> <li>The CRDE will continue providing agricultural advisory services, but with lack of training field infrastructure, and without integrating Climate change adaptation into the training courses. Without financial and technical support, they will not have the capacity to play the role of incubator for promoting business activities for young people in agro-sylvo-pastoral sector.</li> <li>The micro enterprises will not be able amplify the national professional training capacities by providing apprenticeship opportunities for young men and women.</li> <li>Artisanal and small-scale fishing will continue in the absence of concrete measures for the sustained management of halieutic resources</li> <li>Post-harvest losses will represent a significant loss of income for young people and women entrepreneurs.</li> </ul>	<ul> <li>Infrastructure and technical capacities of three Rural Economic Development Centres (CRDE) strengthened</li> <li>Climate change adaptation integrated into the training curricula</li> <li>Access to agricultural advisory services improved</li> <li>Sustainable exploitation and development of fisheries resources ensured through the implementation of fish aggregating devices (FADs) and the strengthening of the biological rest monitoring system</li> <li>Enhanced capacities of trainers and apprentice masters, with a particular focus on climate change adaptation measures within their professional activities.</li> <li>Production and market access facilitated through development of market garden areas, building of post-harvest infrastructure (storage warehouses, ecological cold rooms (CFE) attached to market garden areas), rehabilitation of tracks to transport</li> </ul>

#### Table 4: Cost-effectiveness table

		_	Construction of climate resilient Infrastructures
Со	mponent B. Green business partnerships ar	nd jok	DS
_	A business as usual will try to improve job employment for young people, without considering environmental concerns, and the need to integrate adaptation to climate change into the business plan. The private companies will not have any incentives and capacities to address the environmental norms in their economic processes Young entrepreneurs in the agro-sylvo- pastoralist activities, and in the fishing, will not be equipped integrate climate change adaptation and sustainable natural resources management into their economic models		A catalogue of green and blue job opportunities established and regularly updated In collaboration with the Chamber of Commerce, private companies supported to adopt recognized environmental standards and obtain, for some of them, environmental management certifications such as ISO 14001. A green financing mechanism established to provide awareness-raising, profiling and guidance for 6,000 young people (4,500 of them trained); 3,250 business plans established in the various agro-sylvo- pastoral sectors; and 1,200 young people considered for salaried employment
Со		stitut	ional framework for rural youth employment
_	The Ministry of the Environment lack of human and technical resources to fully carry out its mission of developing, implementing and monitoring environmental and climate policies The relevant sectoral structures (in charge of youth, agriculture and the advancement of women) and the devolved institutions on the islands do not necessarily have the capacity to incorporate adaptation to climate change into their respective sectoral development programmes. There is no effective data collection system to monitor and measure the impact of economic activities on natural resources.	_	Relevant sectoral policies and strategies are supported (Gender strategy for sustainable rural development, National Environment Strategy, National Environment Policy, Nationally Determined Contribution (NDC), National Program for Adaptation to Climate Change (NAPA), National Youth Policy, National Strategy for Gender Mainstreaming in Rural Development) Ministry of Environment capacitated to coordinate the elaboration and implementation of the national environmental and climate change related legal frameworks; A M&E system set up and conducted under the leadership of the Ministry of Environment

# D. Describe how the project is consistent with national or sub-national sustainable development strategies

107. Since 1994, the country has had a national environmental policy, strategy and action plan. The basic principle underlying this policy is the integration of the environmental dimension into the country's social and economic development, through the rational and sustainable management of natural resources and the redefinition or reinforcement of sectoral policies.

108. The country has adopted a comprehensive strategic framework for its development, the Growth and Poverty Reduction Strategy (GPRS) for the period 2010-2014, and has subscribed to the Millennium Development Goals and to the Sustainable Development Goals, which advocate environmental sustainability to reverse the current trend towards loss of environmental resources.

109. The **2030 Agenda for Sustainable Development** states that the Sustainable Development Goals (SDGs) are integrated and indivisible and balance the three dimensions of sustainable development (economic, social, and environmental). In Comoros several other strategies, plans and programs, have been developed, such as the **National Environmental Policy (1994)**, which encompasses the various sectoral strategies. ECO-Youth, through its climate change adaptation measures in favour of young agripreneurs, will contribute to the implementation of all the environmental conventions resulting from Rio, and the strategies that flow from them. With regard to the **Biodiversity Conservation Strategy (and its Action Plan** (2017-2021) ECO-YOUTH will promote the sustainable use of natural resources (Strategic Orientation B of the Biodiversity Conservation Strategy ), enhance the benefits derived from biological diversity through the valorisation of NTPF (Strategic Direction D), as well as capacity building (Strategic Direction E). In the

marine resources sector, ECO-Youth will promote the implementation of Fish Aggregation Devices for the sustainable exploitation of the ecosystem, as part of the **Integrated Coastal Management Program**. With regard to the **Agricultural Strategy**, ECO-Youth will invest in building the capacities of the CRDEs in respect of climate resilience, as the CRDEs are at the heart of the Agricultural Strategy.

110. In addition, it will support the rational management of water resources and the combating of land degradation. ECO-Youth is also designed as a project to implement the **UNFCCC** in Comoros. It contributes directly to the achievement of the **NAPA**, the **NAP** and the **NDC**: Table 3 above presents the main ECO-Youth foreseen contribution to the NDC planned adaptation measures by 2030.

111. In terms of social inclusion, the project will also be aligned with the 2011- 2015 **Poverty Reduction** and Growth Strategy (SRPC, 2011), the National Gender Equity and Equality Policy (PNEEG, 2007), and the National Youth Policy (2017).

# E. Describe how the project meets relevant national technical standards, where applicable, such as standards for environmental assessment, building codes, etc., and complies with the Environmental and Social Policy of the Adaptation Fund.

112. Regarding national technical standards and environmental and social policy, the project complies with applicable national and international law:

113. The Framework Law on the Environment (n° 94-018/AF) of June 1994, amended by Law n° 95-007/AF of June 19, 1995 and Ordinance n° 00-014 of October 9, 2000, defines the general principles of environmental protection and requires an Environmental Impact Assessment (EIA) for all projects likely to have a negative impact on the environment (Article 11). No project may be carried out without environmental authorization from the DGE, and projects taking place in marine areas require joint approval from the relevant ministry and the DGE (Article 32). These laws lay down the basic rules for managing the environment and protecting it from all forms of degradation, with a view to protecting and promoting the rational use of natural resources, combating various forms of pollution and, consequently, improving the quality of life and the functioning of the ecosystem. Articles 73-88 of Law no. 94-018/AF, as amended by Law no. 95-007/AF, set out the penalties for various breaches of the provisions of these and other environmental laws.

114. **Decree no. 01-052/CE of April 19, 2001** governs the environmental impact assessment (EIA) process. According to Article 12 of Law no. 95-007/AF of June 19, 1995, the EIA report must include: (i) an analysis of the basic environment of the project site and its surroundings; (ii) an assessment of the foreseeable consequences of the implementation of the project for its natural and human environment; and (iii) a presentation of the measures planned to reduce or eliminate the harmful effects on the environment, and of the other possibilities, not retained, for implementing the project.

115. Order **no. 12-012/VP of March 2012** establishes and defines the terms of reference for an EIA Assessment Committee.

116. **The Water Act n° 94-037 of December 21, 1994** aims to guarantee the sustainable management of water resources in conditions that enable their conservation and protection against all forms of degradation and pollution, on the one hand, and their sustainable use and exploitation to meet the country's various needs and priorities, on the other. The Act defines the scope of application, the fundamental principles, the institutional framework for water resource management, the protection of water resources, in particular against the negative impacts of water pollution, the management of rainwater, the different use of water and the fines and penalties for breaches of the law.

117. **Law n° 94-018/AF** defines the marine environment in articles 31-36. Emphasis is placed on the importance of the marine environment to the economy of the Comoros. The law authorizes the Minister to promulgate regulations concerning fishing, requires environmental authorization for all developments in the marine environment, and prohibits the dumping of any waste in the ocean.

118. **Law no. 88-006/PR of February 22, 1989** on forests and forestry provides the legal framework for reforestation and forest management.

119. **Law n° 12-001/AU** regulates forestry and reforestation practices.

120. **Law n° 06-010/AU of December 2, 2006** on plant protection in the Comoros, which defines the legal rules for the protection of plants and plant products, in particular those relating to: (i) phytosanitary protection in the Comoros; (ii) sanitary control of imports and exports; (iii) control of the distribution and use of phytosanitary products in the fight against pests of plants and plant products.

121. Law n° 07-011/AU concerns the sustainable development and management of fishing and aquaculture.

122. **Law N°19-05/AU** revising the Fisheries and Aquaculture Code. Title 3 is entirely dedicated to the protection of aquatic species and ecosystems, with the following objectives: (a) Control of activities likely to affect fishing interests; (b) Creation of ex-situ conservation environments; (c) Creation of aquatic protected areas.

123. **Law N°23 -023/AU** amending and supplementing certain provisions of Law N°07-0 11 /AU of August 29, 2007, revised by Law N°19-00S/AU of June 25, 19 revising the Fisheries and Aquaculture Code of the Union of the Comoros,

124. In the event of a legal vacuum, the relevant rules of international law, IFAD rules and the Adaptation Fund's environmental and social policy will apply.

### F. Describe if there is duplication of project with other funding sources, if any.

125. As illustrated in the table below, the ECO-Youth project is distinct from ongoing projects in the Comoros. While drawing lessons from these existing initiatives, ECO-Youth is innovative in its targeting of young people by creating sustainable jobs in the agro-sylvo-pastoral fields. However, ECO-Youth will work closely with the FORCE Jeunes project, which has been granted funding by IFAD, and is due to start up in January 2025. Complementarities and synergies between the two projects will be explored during the design mission.

#### Table 3 List of main projects financed by Technical and Financial Partners

Project name	Type of Measure	Execution agency	Partner institutio n	Description	Budget	Complementarity and synergies
Agricultural value chains project (GEF) 2023-2028	Adaptati	DGEF (MAPE TA)	UNDP	The project aims to address the problems faced by farmers, namely the decline in yields and quality of traditional crops linked to the inevitable effects of climate change, the climatic vulnerability of the agricultural sector due to its low diversification, and the lack of capacity of national institutions and value chain actors, including smallholder farmers, to develop, oversee and implement efficient and cost-effective climate-resilient solutions that will provide decent and resilient livelihoods for the actors concerned.	8,932, 420 USD	
Protecting biodiversity through effective management of the national network of protected areas (GEF)	Mitigatio n & Adaptati on	DGEF (MAPE TA)	UNDP	The long-term solution proposed in this project to address the drivers of biodiversity loss and degradation is to improve the effectiveness of the recently established PA system to ensure the preservation and integrity of the ecosystem services on which the country's emergence and the livelihoods	4,424, 479 USD	This project has no direct links with ECO-Youth foreseen activities, since ECO-Youth will not intervene in the Protected Areas.

2022-2027				of local populations depend. The project will seek to implement this solution through improved concerted planning of land and resource use and ecosystem restoration within PAs,		
Ensuring a climate-resilient water supply (GCF) 2019-2027	Adaptati on	NC	UNDP	The aim of the project is to achieve a national paradigm shift in strengthening the climate resilience of water supply by integrating systematic climate risk reduction approaches into the governance and provision of water resources, watersheds, water supply infrastructure and user management, including planning, investment, design, operation and maintenance.	43,918 ,808 USD	While the GCF project aims to develop national instruments and tools to promote the integrated management of water resources, and to build very large hydraulic infrastructures, ECO-Youth will only be involved on a small scale in the creation of climate- resilient infrastructures in the agro-sylvo-pastoral and fisheries sectors (Component A, Output A.2.1). Exchanges of information between the two projects on their respective activities will be useful in identifying, as appropriate, the possible contribution of ECO- Youth to strengthening water supplies and increasing the resilience of water supply facilities.
Biodiversity conservation through nature- based solutions, pillars of the blue and green economy in the Union of Comoros (GEF, concept approved) 2025-2032	Adaptati on	DGEF (MAPE TA)	UNDP	The BGI project addresses the lack of diversification of the Comorian economy and its high dependence on food imports, the unsustainable use of natural resources contributing to the loss of biodiversity and ecosystem services, the poor management of organic waste and the country's vulnerability to climate change. The project aims to transform the tourism, food and urban sectors into pillars of Comoros' blue and green economy through investments in nature- based solutions (NBS) at the landscape and seascape levels. The project seeks to change the way natural capital and NBS are considered in Comoros' legal and fiscal regulations and by public and private sector actors and investors.	10,040 ,000 USD	This project is in the design phase. During its implementation, it will be useful to discuss the nature-based solutions that this project could develop to combat the unsustainable use of natural resources and the loss of biodiversity and ecosystem services. ECO-YOUTH could benefit from this experience and in turn test nature-based solutions to support the blue economy as part of the envisaged development of Fish Aggregating Devices (ECO- YOUTH, Sub Component A2)
Green and Blue Pact (EU) 2024-2029	Adaptati on	DGEF (MAPE TA)	Experti se France, AFD	The aim of this programme is to strengthen the environmental and food resilience of the Comoros Islands, combat irregular migration to the EU, and promote employment for young people and women, digital technologies, the creation of added value and the development of a circular economy.	14,400 ,000 Euros	Taking advantage of the fact that the Green and Blue Pact comes under the same Ministry, during the design of the ECO-YOUTH full proposal, consultations will be had to ensure there is no risk of duplication.
FORCE Jeunes (IFAD) 2025-2031	Rural develop ment	MAPE TA	IFAD	FORCE Jeunes aims to provide vocational training and decent jobs for young people in the Comoros. This will be achieved through vocational training, apprenticeships, the development of business plans for young people to find employment opportunities and, where appropriate, become entrepreneurs (including men, women and people living with disabilities in the project's geographical areas) for rural enterprises in the green and blue economy, agriculture, livestock and fisheries sectors.	USD 24,000 ,000	The two projects are to be implemented by IFAD, under the supervision of the Ministry in charge of the environment. It is therefore planned that, during the ECO-Youth design phase, FORCE Jeunes will be analyzed to identify risks for duplication.

# **G.** If applicable, describe the learning and knowledge management component to capture and disseminate lessons learned.

126. To promote systematic learning and dissemination of this knowledge, a Knowledge Management and Communication Strategy, along with an operational implementation plan, will be developed the project's inception, as part of Component 3. The purpose of this strategy is to capitalize on the project's experiences and innovations and fostering knowledge sharing and scaling-up opportunities. The strategy will outline methods to promote the project's results and document its innovative approaches and activities, while also defining how this information will be effectively shared vis-à-vis project beneficiaries and external stakeholders.

127. This strategy will rely on the partner youth training institutions established under Components 1 and 2. The learning and knowledge management system will promote the collection, sharing and utilisation of knowledge related to project activities between project components but also at national level.

128. Further details of the project's approach to learning and knowledge management will be provided during the development of the full proposal. This will be informed by additional consultations with key stakeholders and community members in the target localities. The characteristics of the products and the role of information and communication technologies (ICT) in facilitating access to information, data sharing and communication among the stakeholders will be defined during project design, Online platforms, mobile applications or the use of social networks may be considered to facilitate continuous learning and collaboration between the various stakeholders.

H. Describe the consultative process, including the list of stakeholders consulted, undertaken during project preparation, with particular reference to vulnerable groups, including gender considerations, in compliance with the Environmental and Social Policy and Gender Policy of the Adaptation Fund.

129. The mission took place from April 23 to May 4, 2024. The ECO-Youth project concept note is the result of consultations held with national decision-makers, technical and financial partners, as well as local partners and potential beneficiaries.

130. Field visits to potential beneficiaries on the two islands of Grande Comore and Anjouan provided an opportunity to discuss their circumstances and aspirations. Specific conversations took place with women's groups, including those engaged in agricultural productions.

131. Discussions and meetings with local communities in Anjouan highlighted key constraints related to water access (cisterns requirements and water transportation), limited crop mechanization, challenging in accessing cultivated fields, the necessity for dairy breeds improvements and the importance of enhancing product processing capacities, including tomato preservation techniques. A visit to the Maeecha association's training structure confirmed the existence of infrastructures for the training and integration of young people, including girls. It also helped to identify the nature of young people's training needs, as well as the need for some young people to reskill in job-creating sectors such as processing. In fact, there are several conservation initiatives in the fisheries sector, such as a fish smoking unit in Mohéli.

132. The Niamouga women's group, which we met in Anjouan, is an example of a spontaneous and successful initiative. Literacy is mentioned as an important need for the group's autonomy and development. They expressed the need for technical and financial support to strengthen their autonomy and make their group viable. These women face difficulties in accessing the plots, in the absence of tracks and means of transport. In terms of natural resource management, the fight against soil erosion is the most significant challenge for soil conservation, along with the issue of soil fertility. There is a strong demand for more productive dairy breeds and for the development of market gardening to promote conservation.

133. At national level, the mission held meetings with several technical and financial partners, such as FAO and AFD. These partners were consulted to gather information about their own activities and their perspectives on the ECO-Youth project components, ensuring that the project aligns with existing initiatives and incorporates valuable stakeholder feedback.

134. MAPETA's Directorate General for the Environment shared the national priorities for sustainable natural resource management and extended an invitation to the mission to participate to the National Adaptation Plan update process workshop. Information from this workshop contributed to enriching the project's concept note. Additionally, the courtesy visit to the Minister of Agriculture provided an opportunity to discuss the country's constraints and priorities in terms of youth employment and natural resource conservation.

### I. Provide justification for funding requested, focusing on the full cost of adaptation reasoning.

135. The Union of the Comoros is ranked among the world's poorest countries, with a GDP per capita in 2022, and a poverty rate of 45%. The employment rate is only 54% of the population, and over 70% of those in work are poor. The Comoros national budget alone cannot cope with the economic, environmental and social consequences of extreme climatic and meteorological events such as tropical storms, floods, heat waves and droughts, landslides, volcanic eruptions and droughts, which are the main hazards impacting the Union of the Comoros, accentuating the vulnerability of certain ecosystems and groups of already fragile populations.

Component 1. The general observation is that public institutions working in the field of agriculture 136. and fisheries in the Comoros are fragmented, inadequately staffed and poorly managed<sup>24</sup>. In the institutional landscape of actors in the sector, the Rural Economic Development Centres (CRDE) remain the main provider of advisory services for farmers and agricultural professionals. But the capacity of these institutions, which are essential to the fight against poverty and food security, remains weak in terms of both infrastructure and human resources. Several cooperating partners (France, World Bank, FAO) have undertaken to renovate and make operational 7 out of the 19 CRDEs<sup>25</sup>. But these important and necessary support measures are still insufficient to enable the CRDEs to make a greater contribution to the development of entrepreneurship and climate resilience, which are among the major challenges facing Comorian agriculture. This project will upgrade 3 CRDEs, one on each island, by financing the necessary infrastructure, building the technical capacity of staff and producing training content in agro-sylvo-pastoral fields that incorporates climate change adaptation issues and is attractive to young people (notably by introducing modern technologies, extending training to include aspects of processing and marketing agricultural products, etc.). ECO-Youth's aim is to turn these 3 CRDEs into reference centres capable of playing the role of incubators, helping the young people trained to develop bankable business plans for sustainable agro-sylvo-pastoral activities.

137. **Component 2.** Comoros has no green financing mechanism for youth employment. ECO-Youth's ambition is to set up a complete, innovative system for creating green jobs in the agro-sylvo-pastoral sector, from training up to 4500 young people to financing activities compatible with the sustainable management of natural resources. To achieve this, ECO-Youth will work with those involved in training and supporting young people (CRDE, Chamber of Agriculture, incubators and private companies able to take on young people on work-study schemes, etc.) to raise awareness of international environmental standards (ISO standards), and to integrate these aspects into training curricula and the process of drawing up business plans and creating jobs. In support of this orientation, the green financing mechanism to be defined at the project design stage will include climate change adaptation criteria in the analysis grid for business plans submitted for financing.

138. **Component 3**. MAPETA lacks the human and technical resources needed to implement, monitor, and evaluate national strategies and action plans relating to climate change or biodiversity. Capacity is also insufficient to ensure the integration of climate change adaptation aspects into sectoral strategies. To this end, ECO-Youth will support the institutional strengthening of the Ministry of Agriculture, Fisheries, and Handicrafts, and the Ministry of Environment in charge of Tourism, to carry out their mission in this field.

<sup>&</sup>lt;sup>24</sup>World Bank. 2020. Towards a more united & prosperous Union of Comoros - Systematic Country Diagnostic

<sup>&</sup>lt;sup>25</sup> COMPACT. 2023. Comoros National Pact for Food and Agriculture

# J. Describe how the sustainability of the project outcomes has been taken into account when designing the project.

139. The sustainability of the project has been considered in the design of the various components and will be further explored and clarified during the design phase.

140. **Component 1.** The project involves the recalibration of 3 CRDEs, the heart of the permanent support system for young entrepreneurs. The aim is to strengthen the technical capacities of the CRDEs, so that they can expand and adapt their training offer to cover all the professional aspects of the agro-sylvo-pastoral sectors, integrate climate change adaptation aspects into their training curricula, and set up an ongoing support mechanism for the process, including support for the development of business plans for young people. The other sustainability factor in this component concerns the creation of climate-resilient infrastructures to support young people's entrepreneurial initiatives in the agro-sylvo-pastoral and fisheries sectors, adapted to local conditions and foreseeable climate change. These investments will support the blue economy by setting up fish concentration facilities, and will facilitate production and market access by developing market gardening areas, building post-harvest infrastructures (storage warehouses, ecological cold rooms (CFE), attached to market gardening areas), contributing to the rehabilitation of tracks for transporting produce out of production areas, opening input stores, and so on.

141. **Component 2**. ECO-Youth will establish a strategic partnership with a long-term structure, the Maison de l'Emploi (MDE), to integrate the project's activity into national job creation policies and strategies, giving priority to young people and women. This partnership will enable trained young people to be placed with agro-SMEs as part of strategic partnerships with employers, the Chamber of Commerce and Industry, and the National Investment Promotion Agency. Job offers in the fisheries, agriculture and livestock sectors will be continuously monitored and disseminated. The Green Finance Mechanism to be created will integrate adaptation to climate change and climate risk into financing mechanisms, and will be designed as a shared-cost mechanism, involving a financial contribution from the beneficiary.

142. **Component 3.** The two main factors of sustainability in this component relate, on the one hand, to the integration of project activities into national policies and strategies and, on the other, to the capacity building of key institutions that support rural youth enterprises. The project is aligned with the PCE 2030 and sectoral policies (Plan National d'Investissement Agricole, Politique nationale de l'équité et de l'égalité du Genre, Politique Nationale de la Jeunesse, etc.) As such, the project will support the implementation of these policies and strategies, and provide support for the institutional strengthening of the Ministry of Agriculture, Fisheries, Environment, Tourism and Handicrafts.

# K. Provide an overview of the environmental and social impacts and risks identified as being relevant to the project.

143. The environmental and social screening presented in the table below provides a brief overview of the risk assessments. The project, which has therefore been identified as **Category B** (or "moderate risk" using IFAD's categorization) with regards to socio-environmental aspects. The project complies with the relevant national legislation and the investments undertaken by the project will promote climate resilience and take into consideration the vulnerability of the target areas in terms of climate-risks such as extreme heats, landslides, cyclones and coastal floods, increased water shortages, land degradation, negative impact on income and livelihoods of rural poor. The proposed investments and capacity development support also aim to help youth beneficiaries out of poverty through sustainable and diversified sources of income, and by increasing awareness to climate change adaptation and community resilience.

### Table 7: Environmental and social impacts and risks

Checklist of environmental and social principles	No further assessment required for compliance	Potential impacts and risks - further assessment and management required for compliance
Compliance with the Law	further assessed at full proposal design.	The Concept Note has been developed to be in compliance with the legal frameworks of the Union of the Comoros. Relevant national, regional and district authorities have been/will continue to be consulted during proposal development to ensure compliance with all relevant laws. The project will comply with all national relevant laws, regulations and technical standards. In the absence of national standards, the project will apply internationally recognized standards.
Access and Equity	Low/no risk – will be further assessed at full proposal design.	The project design supports equal access to training, equipment, infrastructures, and services, taking especially into account marginalized and vulnerable groups, namely women and youth. It is explicitly indicated through the objective itself of ECO-Youth, which is to target specifically young and women. All the components are built to provide young and women with training and capacity to build business plans, (Component 1), to access funding for developing their own jobs in the agro-sylvo-pastoral fields (Component 2). Equity will be guaranteed by the very nature of the interventions through the implementation of the 2 Components and the inclusion of criteria favourable to young and women in the grids of selection of business plans as well as in the access to the Green Fund designed in Component 2
Marginalized and Vulnerable Groups	Low/no risk – will be further assessed at full proposal design.	The project has been designed to empower marginalized and vulnerable groups to make decisions on concrete adaptation actions, valuing their traditional and local knowledge, through the community adaptation planning process. Marginalized and vulnerable groups - especially women - will be consulted during the proposal development process to ensure that their identified threats, priorities and mitigation measures are reflected, while adequate mitigation measures are adopted in the project's ESMP.
Human Rights	Low/no risk – will be further assessed at full	This project affirms the rights of all people and does not violate any pillar of human rights. The project will ensure respect for international and national labour laws and codes, as stated in IFAD's policies.
Gender Equality and Women's Empowerment	Low/no risk – will be further assessed at full proposal design.	The project will fully mainstream gender and will ensure that women and men and female and male youth equitably engage in and benefit from project activities such trainings and capacity building, or income generating activities. A Gender Assessment will be conducted during the full proposal development, together with a project's gender mainstreaming strategy as a central element of the exit strategy. During the Gender Assessment as well as during the further design and implementation of the project, women and women's groups will be intensively consulted. The Gender Assessment recommendations will be integrated into the ESMP and will inform project implementation.
Core Labour Rights Indigenous Peoples	further assessed at full proposal design.	The project will fully comply with relevant labour laws guided by the ILO labour standards. The ESMP which will be elaborated during the design phase will refer explicitly to the obligation for the contractors to comply with the requirements relating to the safety of workers in accordance with ILO Convention No. 62 insofar as they are applicable to the project. The Contractors should give priority to hiring labour from the surrounding areas to avoid the need for temporary workers' camps.

Involuntary Resettlement		The project is not expected to lead to involuntary resettlement,
		neither in physical nor economic terms.
	proposal design.	
Protection of Natural		During the full IFAD/AF project design, IFAD will carry out an ESA
Habitats		that will identify and exclude protected areas, ensuring that the
	proposal design.	project will not directly or indirectly impact negatively protected areas
_		or high value conservation areas, in accordance with AF safeguards.
Conservation of Biologica		The activities of this project will not adversely impact the
Diversity		conservation of biological diversity. During the full IFAD/AF project
	proposal design.	design IFAD will carry out an ESA that will ensure that the project will
		not directly or indirectly impact negatively biological diversity, in
		accordance with the AF safeguards.
Climate Change	Low/no risk – will be	The entire project is designed to reduce beneficiaries' exposure and
		vulnerability to the effects of climate change and increase their
	proposal design.	resilience. The project will not generate any significant emissions of
		greenhouse gases or reduce carbon sink capacity.
Pollution Prevention and	Low/no risk – will be	The project will not promote any drivers of climate change (emission
Resource Efficiency		of carbon dioxide gas from the use of fossil fuel and from changes in
	proposal design.	land use, methane and nitrous oxide emissions from agriculture,
		emission of hydrofluorocarbons, perfluorocarbons, sulphur
		hexafluoride, other halocarbons, aerosols, and ozone).
		Project activities will be aligned on priorities defined in the NAPA as
		well as the INDCs
Public Health	No risk – will be	No adverse impact on public health related issues is envisaged.
	further assessed at full	
	proposal design.	
Physical and Cultural	No risk – will be	During the ESA carried out by IFAD in the full project design mission,
Heritage		full analyses will be carried out on the potential impact on the
	proposal design.	physical and cultural heritage of the project areas.
Lands and Soil	No risk – will be	The project will promote sustainable land management practices at
Conservation		territorial and farm level. Project activities will not pose risks to land
	proposal design.	and soil conservation, but rather will be specifically designed to
		address land degradation and promote sustainable land
		management and erosion control. Afforestation and agroforestry
		activities will additionally support protection and enhancement of
		lands and soil.
		The project will promote soil and water conservation management
		practices through the field trainings, aiming at restoring degraded
		land and improving ecosystem-based services.

# PART III: IMPLEMENTATION ARRANGEMENTS

### A. Demonstrate how the project aligns with the Results Framework of the Adaptation Fund

Project Outcome	Project Outcome Indicator	Fund Outcome	Fund Outcome Indicator	Grant Amount (USD)						
Component A. Training an development of entrepreneurial and employment initiatives										
Outcome A.2 Development of entrepreneurial and employment initiatives	capacitated	Increased adaptive capacity within relevant development sector services and infrastructure assets	<b>Indicator 4.2</b> . Physical infrastructure improved to withstand climate change and variability-induced stress	2,990,000						
Component B. Green bu	siness partnerships and s	sustainable employm	ent opportunities							
Outcome B.2 Financing young agripreneurs	business plans financed by the green financing mechanism	Diversified and strengthened livelihoods and sources of income for	Output 6.1 Percentage of households and communities having more secure access to livelihood assets	2,700,000						
Component C. Strengthe	ening the policy and instit	utional framework fo	r rural youth employme	ent						
Outcome C.1 Support for policy instruments and the institutional framework	and development	Improved policies and regulations that promote and	Indicator 7 Climate change priorities are integrated into national development strategy	120,000						
Project Output	Project Output Indicator	Fund Output	Fund Output Indicator	Grant Amount (USD)						
Component A	Training and developme	ent of entrepreneurial	and employment initia	tives						
Output A.2.1 Climate-resilient infrastructure to support young people's entrepreneurial initiatives in the agro-sylvo-pastoral and fisheries sectors is built	strengthened or constructed	Vulnerable development sector services and infrastructure assets strengthened in response to climate	Indicator 4.1.2. No. of physical assets strengthened or constructed to withstand conditions resulting from climate variability and change (by sector and scale)
